

Philosophy of Mathematics  
and Mathematical Practice in  
the Seventeenth Century

PAOLO MANCOSU

OXFORD UNIVERSITY PRESS  
New York Oxford

# CONTENTS

1. **Philosophy of Mathematics and Mathematical Practice in the Early Seventeenth Century, 8**
    - 1.1 The *Quaestio de Certitudine Mathematicarum*, 10
    - 1.2 The *Quaestio* in the Seventeenth Century, 15
    - 1.3 The *Quaestio* and Mathematical Practice, 24
  2. **Cavalieri's Geometry of Indivisibles and Guldin's Centers of Gravity, 34**
    - 2.1 Magnitudes, Ratios, and the Method of Exhaustion, 35
    - 2.2 Cavalieri's Two Methods of Indivisibles, 38
    - 2.3 Guldin's Objections to Cavalieri's Geometry of Indivisibles, 50
    - 2.4 Guldin's *Centrobarycæ* and Cavalieri's Objections, 56
  3. **Descartes' *Géométrie*, 65**
    - 3.1 Descartes' *Géométrie*, 65
    - 3.2 The Algebraization of Mathematics, 84
  4. **The Problem of Continuity, 92**
    - 4.1 Motion and Genetic Definitions, 94
    - 4.2 The "Causal" Theories in Arnauld and Bolzano, 100
    - 4.3 Proofs by Contradiction from Kant to the Present, 105
  5. **Paradoxes of the Infinite, 118**
    - 5.1 Indivisibles and Infinitely Small Quantities, 119
    - 5.2 The Infinitely Large, 129
  6. **Leibniz's Differential Calculus and Its Opponents, 150**
    - 6.1 Leibniz's *Nova Methodus* and L'Hôpital's *Analyse des Infiniment Petits*, 151
    - 6.2 Early Debates with Clüver and Nieuwentijt, 156
    - 6.3 The Foundational Debate in the Paris Academy of Sciences, 165
- Appendix: Giuseppe Biancani's *De Mathematicarum Natura*, 178  
*Translated by Gyula Klima*
- Notes, 213
- References, 249
- Index, 267
