CONTENTS

Preface / *v*

1 REDUCTIONS OF STEROIDS BY METAL-AMMONIA SOLUTIONS

Hugh L. Dryden, Jr.

- I. Introduction / 1
- II. Selectivity of Reduction / 2
 - Protection of ketones against reduction / 10
- III. The Birch Reduction of Aromatic Steroids / 11
 - Mechanism of the reduction of aromatic compounds / 12
 - Factors influencing the rate of reduction / 14
 - Protonation of reduction intermediates / 17
 - Origin of by-products in Birch reductions / 18
 - Acidity of proton donor. Effect of iron in Birch reductions / 19
 - Requirements of Birch reduction procedures / 22
 - Experimental conditions for Birch reductions / 25
- IV. Reduction of Conjugated Enones and Dienones,
Saturated Ketones and Ketol Acetates. Reductive
Alkylation / 27
 - Mechanism of reduction / 27
 - Stereochemistry of reduction / 34
 - Side reactions in reductions / 37

- Experimental conditions for metal-ammonia reductions and reductive alkylations / 43
- V. Experimental Procedures / 48
 - Method of Wilds and Nelson for Birch reduction / 48
 - Birch reductions in ammonia-tetrahydrofuran-*t*-butyl alcohol / 49
 - Birch reduction of estradiol 3-methyl ether at 0.12 *M* concentration / 50
 - Birch reduction of the diethyl ketal of estrone 3-methyl ether in ammonia-methylcyclohexane-*t*-amyl alcohol / 51
 - Reduction of 17 α -ethynyl-19-nortestosterone to 4,5 α -dihydro-17 α -ethynyl-19-nortestosterone / 52
 - Reductive deacetoxylation of 11-keto-12 β -hydroxytigogenin diacetate / 53
 - Reductive methylation of the 3-ethylene ketal of pregna-5,16-diene-3,20-dione / 54
 - Reactions in ammonia-toluene-tetrahydrofuran solution / 54

2 REDUCTIONS OF STEROIDAL KETONES

Desmond M. S. Wheeler and Margaret M. Wheeler

- I. Introduction / 61
- II. Hydride Reagents / 61
- III. Reaction Conditions / 63
- IV. Mechanism and Stereochemistry of Reductions of Ketones / 66
- V. Unsaturated Ketones / 73
- VI. Stereochemistry of Reductions of Keto Steroids / 75
 - Lithium aluminum hydride (LiAlH₄) / 75
 - Sodium borohydride (NaBH₄) / 77
 - Lithium tri-*t*-butoxyaluminum hydride / 80
- VII. Selective Reductions of Polyketo Steroids / 81
 - Differential reactivities / 81
 - Protecting groups / 85
- VIII. Other Reagents / 88
 - Lithium aluminum hydride-aluminum chloride / 88
 - Diborane / 89
 - Iridium complexes / 91
 - Lithium cyanohydridoborate / 92
- IX. Experimental Procedures / 92
 - Reductions with sodium borohydride without protecting groups / 92

- Reductions of sodium borohydride with protecting groups / 94
- Reduction with calcium borohydride / 97
- Reduction with lithium aluminum hydride / 98
- Reduction with lithium tri-*t*-butoxyaluminum hydride / 99
- Reduction with diborane / 100
- Reduction with iridium complexes / 101

3 STEROID HYDROGENATION

Robert L. Augustine

- I. Introduction / 111
- II. Factors which Influence Product Stereochemistry / 111
 - Hydrogen availability to the catalyst / 111
 - The catalyst / 113
 - The reaction medium / 113
- III. Olefins / 118
 - Isolated and conjugated double bonds / 118
 - Carbonyl conjugated double bonds / 124
 - Homogeneous catalysis / 131
- IV. Acetylenes / 132
 - Selectivity / 132
 - Experimental procedure / 134
- V. Ketones / 134
 - Selectivity / 134
 - Stereochemistry / 135
 - Ether formation / 136
 - Experimental procedures / 136
- VI. Aromatic Rings / 136
 - Selectivity and stereochemistry / 136
 - Experimental procedure / 138
- VII. Epoxides / 138
 - Selectivity / 138
 - Experimental procedures / 139

4 INTRODUCTION OF DEUTERIUM INTO THE STEROID SYSTEM

László Tökés and Lewis J. Throop

- I. Introduction / 145
- II. Exchange Reactions / 146
 - Active hydrogens / 147
 - Activated hydrogens in saturated carbonyl compounds / 147

	Activated hydrogens in unsaturated carbonyl compounds / 152
	Aromatic and benzylic hydrogens / 156
	Aliphatic hydrogens / 157
	Exchange in the spirostan side chain / 158
III.	Reduction of Carbonyl Functions / 160
	Reduction with metal deuteride complexes / 162
	Reduction with alkali metals / 165
	Electrochemical reduction / 166
	Clemmensen reduction / 169
IV.	Reduction of Carbonyl Derivatives / 170
	Desulfurization of mercaptals / 171
	Reduction of tosylhydrazones / 173
	Reduction of oximes / 178
V.	Saturation of Double Bonds / 179
	Heterogeneous catalytic deuteration / 179
	Homogeneous catalytic deuteration / 184
	Reduction with lithium in deuterioammonia / 188
	Deuterioboration / 191
	Reduction with deuteriodiimide / 195
VI.	Displacement Reactions / 196
	Displacement of sulfonate esters / 196
	Displacement of halides / 199
VII.	Ring Opening / 204
	Opening of oxides / 204
	Opening of cyclopropanes / 206
VIII.	Labeling by Partial or Total Syntheses and Derivative Formation / 208
IX.	Preparation of Deuterium-Containing Reagents / 212
	Methanol-OD / 212
	Ethanol-OD / 213
	Isopropanol-OD / 213
	Ammonia- d_3 / 214
	Deuteriobromic acid / 214
	Methyl iodide- d_3 / 214
	Deuterio-Raney nickel catalyst / 215

5 SELECTIVE OXIDATIONS OF HYDROXY STEROIDS

Gary H. Rasmusson and Glen E. Arth

I.	Introduction / 222
II.	Chromium Oxidation / 223

- III. Chromium VI Reagents / 227
 - Chromium VI-acetic acid / 227
 - Chromium VI-acetone / 228
 - Chromium trioxide-pyridine complex / 229
 - Chromic acid-dimethylformamide / 231
 - Two-phase oxidations / 232
- IV. Oxidation with *N*-Halo Compounds / 232
- V. Oppenauer Oxidation / 234
- VI. Dimethyl Sulfoxide Oxidations / 237
- VII. Oxygen / 239
- VIII. Silver Salts / 241
- IX. Lead Tetraacetate / 242
- X. Ruthenium Tetroxide / 243
- XI. Selective Oxidation of Allylic Alcohols / 244
 - Manganese dioxide / 244
 - Dichlorodicyanobenzoquinone / 247
 - Nickel peroxide / 248
- XII. Cupric Acetate / 249
- XIII. Bismuth Trioxide / 250

6 INTRODUCTION OF DOUBLE BONDS INTO THE STEROID SYSTEM

Colin C. Beard

- I. Introduction / 265
 - α,β -Unsaturated ketones / 266
 - Conjugated and cross-conjugated dienones / 266
 - Conjugated and cross-conjugated trienones / 266
 - Deconjugated enones / 267
 - Simple olefins / 267
 - Simple dienes / 267
 - Special cases / 267
- II. The Preparation of α -Halo Ketones / 267
 - Using halogen, kinetic and thermodynamic products / 268
 - The use of enol acetates / 271
 - The mechanism and stereochemistry of halogenation, physical methods / 273
 - Dihalogenation / 276
 - The use of *N*-halo compounds / 280
 - The use of other reagents / 282
 - The oxidation of halohydrins / 283
 - Vinylogous α -halo ketones / 284

	The selection of method for bromination / 286
III.	The Dehydrohalogenation of α -Halo Ketones / 287
	The use of pyridine bases / 287
	The use of hydrazones / 288
	The use of amide solvents / 290
	The mechanism of dehydrohalogenation / 292
	The choice of method / 292
	Experimental procedures / 293
IV.	The Preparation and Dehydrohalogenation of α -Halo Ketals / 301
	Experimental procedures / 302
V.	The Preparation and Elimination of β -Substituted Ketones / 304
VI.	The Dehydrogenation of Ketones, Enol Derivatives and Olefins / 306
	The use of chloranil / 307
	The use of dichlorodicyanoquinone (DDQ) / 308
	Experimental procedures / 316
	The use of selenium dioxide / 318
	The use of manganese dioxide / 319
VII.	β -Elimination Reactions / 320
	The dehydration of alcohols / 320
	Experimental procedures / 328
	Elimination from sulfonates / 328
	Experimental procedures / 331
	Elimination from halides / 332
	Experimental procedures / 333
	Pyrolytic elimination from esters / 334
	Elimination from nitrogen compounds / 337
VIII.	Reductive Eliminations / 338
	The reduction of vicinal dihalides / 338
	The reduction of halohydrins, halohydrin esters and epoxides / 341
	Experimental procedures / 343
	The reduction of vicinal diol esters / 344
IX.	The Reduction of α,β -Unsaturated Ketones / 345
	Experimental procedures / 347
X.	The Reduction of α -Substituted Ketones / 348
XI.	The Reduction of Keto Derivatives / 351
	The reduction of ketones via hydrazone derivatives / 351
	Experimental procedures / 354
	The reduction of enol derivatives / 355
	The reduction of thioketals / 356

- Experimental procedures / 356
- XII. The Cleavage of Cyclopropanes / 357
- XIII. The Nonreductive Cleavage of Oxides / 358
- XIV. The Isomerization of Olefins and Deconjugation of Enones / 360
- Experimental procedures / 363

7 PROTECTION OF CARBONYL AND HYDROXYL GROUPS

R. Gardi and A. Ercoli

- I. General Discussion / 375
 - Factors governing choice of protecting groups / 375
 - Factors governing selectivity in formation of protecting groups / 375
 - Factors governing selectivity in removal of protecting groups / 382
 - Stability / 385
- II. Applications / 388
 - Protection of carbonyl groups / 388
 - Protection of hydroxyl groups / 402
- III. Experimental Procedures / 406
 - Protection of ketones / 406
 - Protection of hydroxyl groups / 413

8 INTRODUCTION OF FLUORINE INTO THE STEROID SYSTEM

Josef Fried and N. A. Abraham

- I. Introduction / 423
- II. Vicinal Fluorohydrins / 425
 - Choice of reagents / 425
 - Mechanism and stereochemistry / 432
 - Experimental procedures / 433
- III. Monofluorides / 436
 - Choice of reagents / 436
 - Experimental procedures / 446
- IV. Vicinal Difluorides / 451
 - Choice of reagents / 451
 - Experimental procedures / 453
- V. Vicinal Fluorohalides / 454
 - Choice of reagents / 454
 - Mechanism and stereochemistry / 457
 - Experimental procedures / 458

VI. Geminal di- and trifluorides / 459
Choice of reagents / 459
Experimental procedures / 471
VII. 2-Fluoro Ketones and Vinylogous Fluoro Ketones / 474
Choice of reagents / 474
Experimental procedures / 484
Experimental Procedures Index / 495
Subject Index / 499

ORGANIC REACTIONS IN STEROID CHEMISTRY

VOLUME II

Edited by

CONTENTS

Preface / v

9 SYNTHESIS OF OXIRANES, AZIRIDINES AND EPISULFIDES

Gary J. Matthews and Alfred Hassner

- I. General Introduction / 1
- II. Oxiranes / 2
 - Introduction / 2
 - Peracid epoxidation / 2
 - Alkaline hydrogen peroxide epoxidation / 10
 - Conversion of an oxirane into its stereoisomer / 14
 - Epoxide formation via halohydrins / 15
 - Spectra / 18
 - Experimental procedures / 19
- III. Aziridines / 22
 - Introduction / 22
 - Iodine isocyanate addition to olefins / 22
 - Halogen azide addition to olefins / 24
 - Via epoxides and β -mesyloxy azides / 27
 - By addition of alkoxyamines / 29
 - Addition of cyanogen azide and "nitrenoid" species to olefins / 30
 - Miscellaneous / 30

- Spectra / 31
- Experimental procedures / 31
- IV. Thiiranes / 37
 - Introduction / 37
 - By thiocyanate opening of epoxides / 37
 - From α -bromo ketones / 42
 - Spectra / 42
 - Experimental procedures / 42
- 10 SELECTIVE INTRODUCTION OF ALKYL AND METHYLENE GROUPS INTO THE STEROID SYSTEM**
 - Henry Laurent and Rudolf Wiechert
 - I. Organometallic Additions to Ketones, Conjugated Ketones and Epoxides / 53
 - Introduction / 53
 - Organometallic addition to ketones / 56
 - Grignard additions to unsaturated ketones / 75
 - Organometallic addition to epoxides / 82
 - II. Alkylation via Enolate Anions / 86
 - Introduction / 86
 - Direct alkylation / 87
 - Alkylation of Formyl ketones / 93
 - Methylation of α -oxalyl ketones / 95
 - Reductive alkylation / 97
 - III. Addition of Diazomethane to Enones / 100
 - Introduction / 100
 - Discussion / 102
 - IV. Simmons-Smith Reaction / 107
 - Introduction / 107
 - Discussion / 108
 - V. Addition of Dimethyloxosulfonium Methylide to Enones / 113
 - Introduction / 113
 - Discussion / 115
- 11 SYNTHESIS AND DEGRADATION OF THE PREGNANE SIDE-CHAIN**
 - Eugene P. Oliveto
 - I. Introduction / 127
 - II. The Conversion of Antrostanes to Pregnanes / 129
 - The Wittig reaction / 129

- Via 17-cyanohydrins / 132
- The addition of acetylenes / 136
- The Reformatsky reaction / 139
- III. The Conversion of Pregnanes to Androstanes / 140
 - The Beckmann rearrangement / 140
 - The Schmidt rearrangement / 144
 - Microbiological degradation of pregnanes to androstanes / 146
 - The cleavage of 17,20-oxygenated pregnanes / 147
 - The Baeyer-Villiger reaction / 151
 - Nitrite degradation / 154
 - Nitrite photolysis / 154
 - Manganese dioxide degradation / 156
 - Degradation via 17-hydroperoxides / 156
 - Ozonolysis of $\Delta^{17(20)}$ -pregnenes / 158
 - Fragmentation of 16-oxygenated pregnanes / 162
- IV. Side-Chain Oxygenation of Pregnanes / 162
 - 17-Mono-oxygenated pregnanes / 162
 - 20-Mono-oxygenated pregnanes / 165
 - 21-Mono-oxygenated pregnanes / 176
 - 17,20-Bis-oxygenated pregnanes / 183
 - 20,21-Bis-oxygenated pregnanes / 201
 - 17,20,21-Tris-oxygenated pregnanes / 217

12 SELECTIVE FUNCTIONALIZATION OF THE ANGULAR METHYL GROUP AND FURTHER TRANSFORMATION TO 19-NORSTEROIDS

Karl Heusler and Jaroslav Kalvoda

- I. Introduction / 237
- II. Functionalization of the Angular Methyl Groups / 237
 - General principles of substitution / 237
 - Lead tetraacetate oxidations / 240
 - Hypohalite reactions / 246
 - Photolysis of nitrites (Barton reaction) / 253
 - N-Chloroamine reactions (Hoffmann-Löffler reaction) / 257
 - Ketone irradiations / 260
 - Summary / 264
- III. Preparation of 19-Norsteroids from 19-Substituted Steroids / 264
 - Transformations of 6 β , 19-ethers / 264
 - Transformation of 19-oximino derivatives / 268
 - Removal of the C-10 substituent / 272
 - Summary and procedures for 19-norsteroids / 278

13 PHOTOCHEMICAL REARRANGEMENTS AND CYCLO-ADDITIONS

Kurt Schaffner

- I. Introduction / 288
- II. Transformations of Nonconjugated Ketones / 292
 - α -Cleavage / 296
 - Oxcarbene formation / 307
 - Cleavage of bonds attaching atoms or groups to the α -carbon of ketones / 307
 - Cyclic α -diazoketones: Ring contraction in photolytic Wolff rearrangements / 316
 - Autooxidation of ketones / 316
- III. Transformations of Conjugated Cyclohexenones / 317
 - The cyclohex-2-enone $\rightarrow$ bicyclo[3.1.0]hexan-2-one rearrangement / 318
 - Cyclohex-2-enones: Cleavage of exocyclic γ,δ -bonds and $\beta \rightarrow \delta$ -bonding to δ,ϵ -double bonds / 323
 - Rearrangements of cross-conjugated cyclohexadienones and their photoisomers / 330
- IV. Rearrangements of Enol Esters and Enol Lactones / 339
- V. Cycloadditions to Conjugated Enones / 343

14 RING EXPANSION AND SIMULTANEOUS RING CONTRACTION—RING EXPANSION

George A. Boswell, Jr.

- I. Introduction / 354
- II. Ring A Expansion: A-Homosteroids / 355
 - Saturated A-homo ketones / 355
 - Unsaturated A-homosteroids / 361
 - Ring A tropones / 367
 - Summary / 373
- III. B-Homosteroids / 374
 - Saturated B-homo ketones and hydrocarbons / 374
 - Unsaturated B-homo ketones / 378
 - B-Homo-19-norsteroids / 379
 - Summary / 382
- IV. D-Homosteroids / 382
 - Ring D homoannulation of 17-hydroxy-20-ketopregnane derivatives / 382
 - Tiffeneau ring enlargement of 17-keto steroids / 386
 - Summary / 389

- V. 10(5 $\rightarrow$ 6 β H)*Abeosteroids* (A-Homo-B-Norsteroids) / 389
 - Solvolysis of 5 α ,6 α -epoxy-6-methyl steroids / 389
 - Pinacol rearrangement of 5 α -hydroxy-6 α -tosylates / 392
 - Summary / 394
- VI. 10(5 $\rightarrow$ 4)*Abeosteroids* (A-Nor-B-Homosteroids) / 395
 - From $\Delta^{5,10}$ -3-keto steroids / 395
 - By photolysis / 396
 - By solvolysis of 5 α -hydroxy-5 α -tosyloxy steroids / 398
 - Summary / 400
- VII. 14(13 $\rightarrow$ 12 α H)*Abeosteroids* (C-Nor-D-Homo Steroids) / 400
 - By solvolysis of 12 β -methylsulfonyloxy steroids / 400
 - By fragmentation-rearrangement of 12-tosylhydrazones / 402

15 RING CONTRACTIONS

Richard M. Scribner

- I. Introduction / 408
- II. A-Norsteroids / 408
 - Pyrolysis of 2,3-seco-2,3-dicarboxylic acid anhydrides / 408
 - Pyrolysis of Δ^4 -2,3-seco-2,3-dicarboxylic acid anhydrides / 410
 - Reaction of enamines of 3-ketones with cyanogen azide / 412
 - Retropinacol rearrangement of 4,4-dimethyl-3 β -ols / 416
 - Benzilic acid rearrangement of A-ring α -diketones / 418
 - Oxidative rearrangements of A-ring α -diketones by manganese dioxide / 426
 - Photochemical rearrangements / 428
- III. B-Norsteroids / 429
 - Chromium trioxide oxidation of Δ^5 -steroids / 429
 - Ozonization of Δ^5 -steroids / 431
 - Baeyer-Villiger oxidation of 5-hydroxy-6-keto steroids / 433
- IV. C-Norsteroids / 435
 - Benzilic rearrangements / 435
 - Rearrangement of epoxides / 438
- V. D-Norsteroids / 439
 - Photolysis of α -diazoketones / 439

Experimental Procedures Index / 449

Subject Index / 455
