CONTENTS

Preface	xi
Acknowledgments	xiii
1. X-Ray Imaging and Computed Tomography	1
1.1. General Principles of Imaging with X-Rays / 1	
1.2. X-Ray Production / 2	
1.2.1. The X-Ray Source / 3	
1.2.2. X-Ray Tube Current, Tube Output, and Beam Intensity / 5	
1.2.3. The X-Ray Energy Spectrum / 7	
1.3. Interactions of X-Rays with Tissue / 9	
1.3.1. Coherent Scattering / 9	
1.3.2. Compton Scattering / 9	
1.3.3. The Photoelectric Effect / 11	
1.4. Linear and Mass Attenuation Coefficients of X-Rays in Tissue / 12	
1.5. Instrumentation for Planar X-Ray Imaging / 15	
1.5.1. Collimators / 15	
1.5.2. Antiscatter Grids / 15	
1.5.3. Intensifying Screens / 17	
1.5.4. X-Ray Film / 19	
1.5.5. Instrumentation for Computed and Digital Radiography / 20	
1.6. X-Ray Image Characteristics / 22	
1.6.1. Signal-to-Noise Ratio / 22	
1.6.2. Spatial Resolution / 23	
1.6.3. Contrast-to-Noise Ratio / 25	
1.7. X-Ray Contrast Agents / 26	
1.8. X-Ray Imaging Methods / 28	
1.8.1. X-Ray Angiography / 28	

- 1.8.2. X-Ray Fluoroscopy / 29
- 1.8.3. Dual-Energy Imaging / 31
- 1.9. Clinical Applications of X-Ray Imaging / 32
 - 1.9.1. Mammography / 32
 - 1.9.2. Abdominal X-Ray Scans / 33
- 1.10. Computed Tomography / 34
 - 1.10.1. Scanner Instrumentation / 35
 - 1.10.2. Detectors for Computed Tomography / 37
- 1.11. Image Processing for Computed Tomography / 38
 - 1.11.1. Preprocessing Data Corrections / 39
 - 1.11.2. The Radon Transform and Backprojection Techniques / 39
 - 1.11.3. Fan-Beam Reconstructions / 40
 - 1.11.4. Iterative Algorithms / 41
- 1.12. Spiral/Helical Computed Tomography / 43
- 1.13. Multislice Spiral Computed Tomography / 45
- 1.14. Radiation Dose / 47
- 1.15. Clinical Applications of Computed Tomography / 48
 - 1.15.1. Cerebral Scans / 48
 - 1.15.2. Pulmonary Disease / 49
 - 1.15.3. Abdominal Imaging / 49
- Exercises / 50
- Further Reading / 56

2. Nuclear Medicine

57

- 2.1. General Principles of Nuclear Medicine / 57
- 2.2. Radioactivity / 59
- 2.3. The Production of Radionuclides / 60
- 2.4. Types of Radioactive Decay / 61
- 2.5. The Technetium Generator / 63
- 2.6. The Biodistribution of Technetium-Based Agents within the Body / 65
- 2.7. Instrumentation: The Gamma Camera / 66
 - 2.7.1. Collimators / 66
 - 2.7.2. The Scintillation Crystal and Coupled Photomultiplier Tubes / 69
 - 2.7.3. The Anger Position Network and the Pulse Height Analyzer / 71
- 2.8. Image Characteristics / 73
 - 2.8.1. Signal-to-Noise Ratio / 73
 - 2.8.2. Spatial Resolution / 74
 - 2.8.3. Contrast-to-Noise Ratio / 74
- 2.9. Single Photon Emission Computed Tomography / 75
 - 2.9.1. Instrumentation for SPECT / 76

- 2.9.2. Scatter and Attenuation Correction / 77
- 2.9.3. Image Reconstruction / 79
- 2.10. Clinical Applications of Nuclear Medicine / 80
 - 2.10.1. Brain Imaging / 80
 - 2.10.2. Bone Scanning and Tumor Detection / 82
 - 2.10.3. Cardiac Imaging / 84
 - 2.10.4. The Respiratory System / 86
 - 2.10.5. The Liver and Reticuloendothelial System / 87
 - 2.10.6. Renal Imaging / 88
- 2.11. Positron Emission Tomography / 89
 - 2.11.1. General Principles / 89
 - 2.11.2. Radionuclides Used for PET / 90
 - 2.11.3. Instrumentation for PET / 91
 - 2.11.4. Image Reconstruction / 94
 - 2.11.5. Image Characteristics / 97
 - 2.11.6. Multislice and Three-Dimensional PET Imaging / 98
 - 2.11.7. Clinical Applications of PET / 99
- Exercises / 102
- Further Reading / 104

3. Ultrasonic Imaging

107

- 3.1. General Principles of Ultrasonic Imaging / 107
- 3.2. Wave Propagation and Characteristic Acoustic Impedance / 108
- 3.3. Wave Reflection and Refraction / 111
- 3.4. Energy Loss Mechanisms in Tissue / 113
 - 3.4.1. Absorption / 113
 - 3.4.2. Scattering / 115
 - 3.4.3. Attenuation / 115
- 3.5. Instrumentation / 116
 - 3.5.1. Single-Crystal Transducers / 117
 - 3.5.2. Transducer Arrays / 125
 - 3.5.3. Beam Forming and Time-Gain Compensation / 128
- 3.6. Diagnostic Scanning Modes / 131
 - 3.6.1. A-Mode, M-Mode, and B-Mode Scans / 131
 - 3.6.2. Three-Dimensional Imaging / 132
- 3.7. Artifacts in Ultrasonic Imaging / 133
- 3.8. Image Characteristics / 134
 - 3.8.1. Signal-to-Noise Ratio / 134
 - 3.8.2. Spatial Resolution / 135
 - 3.8.3. Contrast-to-Noise Ratio / 135
- 3.9. Compound Imaging / 135
- 3.10. Blood Velocity Measurements Using Ultrasound / 136
 - 3.10.1. The Doppler Effect / 136

- 3.10.2. Continuous Wave Doppler Measurements / 138
- 3.10.3. Pulsed-Mode Doppler Measurements / 140
- 3.10.4. Color Doppler/B-Mode Duplex Imaging / 142
- 3.10.5. Time-Domain Correlation/Color Velocity Imaging / 143
- 3.11. Ultrasound Contrast Agents, Harmonic Imaging, and Pulse Inversion Techniques / 145
- 3.12. Safety and Bioeffects in Ultrasonic Imaging / 147
- 3.13. Clinical Applications of Ultrasound / 148
 - 3.13.1. Obstetrics and Gynecology / 148
 - 3.13.2. Breast Imaging / 148
 - 3.13.3. Musculoskeletal Structure / 150
 - 3.13.4. Cardiac Disease / 150
- Exercises / 151
- Further Reading / 153

4. Magnetic Resonance Imaging

157

- 4.1. General Principles of Magnetic Resonance Imaging / 157
- 4.2. Nuclear Magnetism / 158
 - 4.2.1. Quantum Mechanical Description / 158
 - 4.2.2. Classical Description / 162
 - 4.2.3. Radiofrequency Pulses and the Rotating Reference Frame / 163
 - 4.2.4. Spin-Lattice and Spin-Spin Relaxation / 167
 - 4.2.5. Measurement of T_1 and T_2 : Inversion Recovery and Spin-Echo Sequences / 170
 - 4.2.6. Signal Demodulation, Digitization, and Fourier Transformation / 172
- 4.3. Magnetic Resonance Imaging / 174
 - 4.3.1. Slice Selection / 176
 - 4.3.2. Phase-Encoding / 178
 - 4.3.3. Frequency-Encoding / 178
 - 4.3.4. The k -Space Formalism / 179
- 4.4. Instrumentation / 182
 - 4.4.1. Magnet Design / 183
 - 4.4.2. Magnetic Field Gradient Coils / 184
 - 4.4.3. Radiofrequency Coils / 186
- 4.5. Imaging Sequences / 189
 - 4.5.1. Spin-Echo Imaging Sequences / 189
 - 4.5.2. T_1 - and T_2 -Weighted Imaging Sequences / 190
 - 4.5.3. Multislice Imaging / 193
 - 4.5.4. Rapid Gradient-Echo Sequences and Three-Dimensional Imaging / 193

- 4.5.5. Echo-Planar Imaging / 196
- 4.5.6. Spiral Imaging / 197
- 4.6. Image Characteristics / 198
 - 4.6.1. Signal-to-Noise Ratio / 198
 - 4.6.2. Spatial Resolution / 199
 - 4.6.3. Contrast-to-Noise Ratio / 199
- 4.7. MRI Contrast Agents / 199
 - 4.7.1. Paramagnetic Agents / 200
 - 4.7.2. Superparamagnetic Agents / 201
- 4.8. Magnetic Resonance Angiography / 202
 - 4.8.1. Time-of-Flight Methods / 202
 - 4.8.2. Phase-Contrast Methods / 203
- 4.9. Diffusion-Weighted Imaging / 205
- 4.10. *In Vivo* Localized Spectroscopy / 206
- 4.11. Functional MRI / 208
- 4.12. Clinical Applications of MRI / 210
 - 4.12.1. Brain / 211
 - 4.12.2. Liver and the Reticuloendothelial System / 212
 - 4.12.3. Musculoskeletal System / 212
 - 4.12.4. Cardiac System / 213
- Exercises / 214
- Further Reading / 216

5. General Image Characteristics

220

- 5.1. Introduction / 220
- 5.2. Spatial Resolution / 220
 - 5.2.1. The Point Spread Function / 220
 - 5.2.2. Resolution Criteria / 222
 - 5.2.3. The Line Spread Function and Edge Spread Function / 223
 - 5.2.4. The Modulation Transfer Function / 224
- 5.3. Signal-to-Noise Ratio / 225
 - 5.3.1. The Poisson Distribution / 225
 - 5.3.2. Signal Averaging / 227
- 5.4. Contrast-to-Noise Ratio / 228
- 5.5. Image Filtering / 229
- 5.6. The Receiver Operating Curve / 231

Appendix A. The Fourier Transform

233

- A.1. Introduction / 233
- A.2. Fourier Transformation of Time-Domain / 233
 - A.2.1. Useful Properties of the Fourier Transform / 235

Appendix B. Backprojection and Filtered Backprojection	237
B.1. Introduction /	237
B.2. Backprojection /	238
B.3. Filtered Backprojection /	239
Abbreviations	245
Index	247
