# CLIMATE FOR COLLECTIONS STANDARDS AND UNCERTAINTIES

DOERNER INSTITUT

Climate for Culture

## Contents

- 011 Allowable microclimatic variations in museums and historic buildings: reviewing the guidelines  
Łukasz Bratasz
- 021 Towards a common understanding of standards?  
Jane Henderson and Shumeng Dai
- 035 Conservation of cultural heritage – European standards on the environment  
Jesper Stub Johnsen
- 045 Collections demography: stakeholders' views on the lifetime of collections  
Catherine Dillon, William Lindsay, Joel Taylor, Kalliopi Fouseki, Nancy Bell and Matija Strlič
- 059 The limits of Garry Thomson's Museums Temperate Zone: can they be enlarged?  
Luis Efreem Elías Casanovas, Vasco Peixoto de Freitas, Cláudia Ferreira and Sílvia Oliveira Sequeira
- 069 Acoustic emission monitoring: on the path to rational strategies for collection care  
Michał Łukomski, Janusz Czop, Marcin Strojecki and Łukasz Bratasz
- 081 How the usual museum climate recommendations endanger our cultural heritage  
Andreas Schulze
- 093 Field-tested methodology for optimizing climate management  
Jeremy Linden, James M. Reilly and Peter Herzog
- 105 Evaluation of different approaches of microclimate control in cultural heritage buildings  
Tor Broström, Tomas Vyhliđal, Goran Simeunovic, Poul Klens Larsen and Pavel Zítek
- 117 A critical look at the use of HVAC systems in the museum environment  
Edgar Neuhaus
- 127 The role of historic house heating systems in collections climate control at the National Trust  
Nigel Blades, Hazel Jessep and Katy Lithgow
- 141 A museum storage facility controlled by solar energy  
Morten Ryhl-Svendsen, Lars Aasbjerg Jensen, Poul Klens Larsen, Benny Bøhm and Tim Padfield
- 151 Passively conditioned zero-energy storage for cultural properties and archival material  
Lars Klemm

- 163 New meets old – the requirements and limits of new collection facilities at the Museum für Naturkunde Berlin  
Peter Bartsch, Christiane Quaisser, Peter Giere, Arwid Theuer-Kock and Norbert Feck
- 179 The use of underground structures as a solution towards sustainable museums in the Mediterranean basin  
Dimitrios Karolidis
- 193 Sustainable climate control for art galleries? Experiences at Liverpool's Walker Art Gallery  
David Crombie, Chris Bailey, Bernard Connolly, Sonia Jones, Siobhan Watts and Sally Ann Yates
- 207 Solutions for challenging buildings: Storage projects at the Science Museum  
Marta Leskard and Louisa Burden
- 217 Learning from history. Historic indoor climate conditions and climate control strategies  
Melanie Eibl and Andreas Burmester
- 233 From artwork to building preservation. Some considerations on the 'historical' indoor climate of Villa Reale in Milan  
Andrea Luciani, Carlo Manfredi, Davide Del Curto and Luca P. Valisi
- 247 Uncertainties in the interaction between a canvas painting support and moisture  
Anna von Reden
- 257 Monitoring complex objects in real display environments – how helpful is it?  
Naomi Luxford and David Thickett
- 271 What real museum objects can teach us about the influence of climate conditions  
Paul van Duin
- 283 The Oseberg ship. Long-term physical-mechanical monitoring in an uncontrolled relative humidity exhibition environment. Analytical results and hygromechanical modeling  
Paolo Dionisi-Vici, Ottaviano Allegretti, Susan Braovac, Guro Hjulstad, Maria Jensen and Elin Storbekk
- 299 Comparison of indoor climate analysis according to current climate guidelines with the conservational investigation using the example of Linderhof Palace  
Kristina Holl
- 311 Quantification, the link to relate climate-induced damage to indoor environments in historic buildings  
Charlotta Bylund Melin and Mattias Legnér
- 325 Development of damage functions for copper, silver and enamels on copper  
David Thickett, Rebecca Chisholm and Paul Lankester

- 337 Delivering damage functions in enclosures  
Paul Lankester and David Thickett
- 349 Stuffing everything we know about mechanical properties  
into one collection simulation  
Stefan Michalski
- 363 Climate risk assessment in museums  
Marco Martens and Henk Schellen
- 375 The use of computer simulation models to evaluate the  
risks of damage to objects exposed to varying indoor climate  
conditions in the past, present, and future  
Zara Huijbregts, Marco Martens, Jos van Schijndel and  
Henk Schellen
- 389 The application of damage functions to future indoor climate  
predictions  
Paul Lankester, Peter Brimblecombe and David Thickett
- 405 Uncertainties in damage assessments of future  
indoor climates  
Gustaf Leijonhufvud, Erik Kjellström, Tor Broström,  
Jonathan Ashley-Smith and Dario Camuffo
- 419 The influence of the museum environment in controlling  
insect pests  
Robert Child
- 425 Inverse modeling of climate responses of monumental  
buildings  
Rick Kramer, Jos van Schijndel and Henk Schellen
- 439 The moving fluctuation range – a new analytical method for  
evaluation of climate fluctuations in historic buildings  
Stefan Bichlmair, Kristina Holl and Ralf Kilian
