**Jan Kmenta**

PROFESSOR OF ECONOMICS
MICHIGAN STATE UNIVERSITY

# Elements of Econometrics

The Macmillan Company · NEW YORK
COLLIER-MACMILLAN LIMITED · LONDON

# Contents

## Part ONE
## Basic Statistical Theory

CHAPTER 1 Introduction to Statistical Inference 1

1–1 Basic concepts of statistical inference 1
1–2 The nature of statistical inference 7
1–3 Sampling distributions 8
1–4 Properties of sampling distributions 10
1–5 Derivation of sampling distributions 14

CHAPTER 2 Experimental Derivation of Sampling Distributions 18

2–1 Sampling distribution of sample proportions of successes 19
2–2 Sampling distribution of sample means 23

CHAPTER 3 Probability and Probability Distributions 30

3–1 Sets and sample spaces 32
3–2 Permutations and combinations 34
3–3 Basic theorems of probability theory 40
3–4 Discrete random variables and probability functions 48
3–5 Continuous random variables and probability functions 54
3–6 Mathematical expectation 57

CHAPTER 4 Theoretical Derivation of Sampling Distributions 70

4–1 Sampling distribution of sample proportion of successes: binomial distribution 70
4–2 Normal distribution as the limiting case of binomial distribution 78
4–3 Sampling distribution of sample mean 90

CHAPTER 5 Tests of Hypotheses 112

5–1 Design and evaluation of tests 112
5–2 Distribution of selected test statistics 136

CHAPTER 6 Estimation 154

6–1 Properties of estimators 155
6–2 Methods of estimation 171
6–3 Confidence intervals 186

## Part TWO
## Basic Econometric Theory

CHAPTER 7 Simple Regression 197

7–1 Relations between variables 197
7–2 The regression model 201
7–3 Estimation of regression parameters 205
7–4 Further results of statistical inference 216

CHAPTER 8 Violations of Basic Assumptions 247

8–1 Heteroskedasticity 249
8–2 Autoregressive disturbances 269
8–3 Stochastic explanatory variable 297

CHAPTER 9 Estimation with Deficient Data 307

9–1 Errors of measurement 307
9–2 Estimation from grouped data 322
9–3 Estimation when some observations are missing 336

CHAPTER 10 Multiple Regression 347

10–1 Estimation of regression parameters 347
10–2 Further results of statistical inference 357
10–3 Multicollinearity 380
10–4 Specification errors 391

CHAPTER 11 Formulation and Estimation of Special Models 409

11–1 Models with binary variables 409
11–2 Models with restricted coefficients 430
11–3 Nonlinear models 451
11–4 Distributed lag models 473

CHAPTER 12 Generalized Linear Regression Model and Its Applications 499

12–1 Generalized linear regression model 499
12–2 Pooling of cross-section and time-series data 508
12–3 Seemingly unrelated regressions 517

CHAPTER 13 Simultaneous Equation Systems 531

13–1 Description of simultaneous equation systems 531
13–2 The identification problem 539
13–3 Single-equation methods of estimation 550
13–4 System methods of estimation 573
13–5 Comparison of alternative methods of estimation and special problems 581
13–6 Analysis of dynamic econometric models 589

APPENDIX

A. Algebra of summations 601
B. Elements of matrix algebra 604
C. Computational design for least squares estimation 613
D. Statistical tables 620

SUGGESTED FURTHER READINGS 639
