

The Physics of SPORTS

Michael Lisa
The Ohio State University

CONTENTS

McGraw-Hill Smartbook	xv
Preface to the Student	xvi
Preface to the Instructor	xviii
Acknowledgments	xxiii
Part I Primary Chapters	1
1 Warm-Up: Basic Concepts	2
1.1 Quantifying the World of Sports	
<i>Units, conversions, scientific notation</i>	3
1.1.1 Scientific Notation	3
1.1.2 Units and Conversions	3
1.2 When We Don't Have Exact Numbers	
<i>Estimation, typical scales</i>	5
1.2.1 Estimation with Photos and Videos	6
1.2.2 Typical Scales	7
1.3 The Center of Mass	
<i>Center of mass</i>	8
1.3.1 Some Facts	9
Problems	11
2 Racing, Mathematically	
<i>1D kinematics</i>	14
2.1 Phelps in Beijing	
<i>Speed, velocity, position, and graphs</i>	15
2.1.1 Speed	15
2.1.2 Position and Graphs	15
2.1.3 Displacement and Average Velocity	16
2.1.4 Vectors and Scalars	17
2.1.5 Instantaneous Velocity	18
2.2 Bolt in Berlin	
<i>Acceleration, constant-acceleration kinematics</i>	20
2.2.1 Exploding Off the Block	20
2.2.2 Constant Acceleration Kinematics	23
2.2.3 The Signs a and v	24
2.3 Rope-Climbing and Diving	
<i>Vertical motion and gravity</i>	27
2.3.1 The 800-lb Gorilla: Gravity	28
2.3.2 Freefall Time	29
2.3.3 Landing Velocity	31
2.3.4 The Symmetry of a Vertical Leap, Hang Time	31
Collected Equations	33
Problems	34

3	Net Force: Dwight Howard Illustrates	
	<i>Forces, dynamics</i>	39
3.1	How Things Interact: Forces	40
3.2	The Physics of a Dwight Howard Dunk	40
	3.2.1 Waiting for the Pass	
	<i>Weight, ground reaction force, equilibrium, free-body diagrams, Newton's first law</i>	40
	3.2.2 Spec Sheet	
	<i>Weight and mass</i>	42
	3.2.3 The Launch	
	<i>Newton's second and third laws; dynamics of a jump; dynamics with nonconstant forces; ground reaction force</i>	45
	3.2.4 The Flight	
	<i>Free-fall dynamics, revisited</i>	52
	3.2.5 The Landing	
	<i>Cushioning limitations, GRF revisited</i>	53
3.3	Sideways Traction	
	<i>Friction</i>	55
	3.3.1 Static and Kinetic Friction	56
	3.3.2 Anti-Lock Brakes and Traction Control	57
3.4	More-Complex Situations	
	<i>2D dynamics and applications</i>	59
	3.4.1 Dwight Howard Takes a Quick Step	
	<i>Vectors</i>	59
	3.4.2 Football Tryouts	
	<i>Two moving bodies; how to increase friction</i>	62
	3.4.3 Increasing Friction in Race Cars	64
	3.4.4 Ball Throw Speed	
	<i>Important application</i>	65
3.5	"Imaginary Forces" in Sports	67
	3.5.1 Imaginary Pushes on Dale Earnhardt Jr.	
	<i>Sensation of force in a noninertial frame</i>	67
	3.5.2 Two Nontraditional Olympic Events	
	<i>Potential to mistakenly interpret a reaction force</i>	68
	3.5.3 Discus Throw	
	<i>Centripetal and "centrifugal" forces</i>	69
	Collected Equations	75
	Problems	76
4	Punts, the Fosbury Flop, and Other Projectile Motions	
	<i>Projectile motion</i>	80
4.1	The Math: Simpler Than You Think	
	<i>2D kinematics</i>	81

4.2	Football Punt: Range, Hang Time, and Compromise	
	<i>Range, hang time</i>	83
4.2.1	A Quick Example	84
4.2.2	The Optimum Angle	84
4.2.3	Punting Strategy and Compromises	86
4.3	Shot-Put	
	<i>The range when the starting and ending heights are not the same</i>	88
4.3.1	Optimum Shot-put Launch Angle	89
4.4	Human Projectiles	
	<i>Parabolic motion of center of mass with changing body shape</i>	91
4.4.1	The Blake Griffin Ballet	91
4.4.2	Dick Fosbury's Flop	92
4.4.3	Bob Beamon's Long Jump	94
	Collected Equations	99
	Problems	99
5	Curveballs, Foul Shots, and Bent Kicks	
	<i>Aerodynamic forces</i>	105
5.1	Overview	
	<i>Four forces; use of approximations</i>	106
5.1.1	Approximations	106
5.2	Immersion in Fluid: Buoyancy	
	<i>Buoyant force</i>	107
5.2.1	Buoyancy in Air	109
5.3	Moving Through Fluid Drag	
	<i>Drag force, drag coefficient, terminal velocity</i>	110
5.3.1	A Cartoon Image of Drag	110
5.3.2	Important Complication 1: Speed Dependence of C_D	111
5.3.3	Important Complication 2: C_D and Surface Roughness	112
5.3.4	And More Complications . . .	113
5.3.5	Terminal Velocity	114
5.4	Sideward Forces from Asymmetries	115
5.4.1	The Swing of a Cricket Ball	
	<i>Sideward force from asymmetric surface roughness</i>	116
5.4.2	Bending a Ball's Flight	
	<i>Magnus force</i>	117
5.5	Aerodynamic Forces, One at a Time	
	<i>Examples</i>	119
5.5.1	Curveballs and Subatomic Physics	
	<i>Magnus as a centripetal force; unexpected analogy</i>	120
5.5.2	Do We Need a Computer?	
	<i>Constant-force approximation</i>	122

5.5.3	A Simple Formula for a Curveball <i>Sideward deflection over a short part of the spiral</i>	123
5.5.4	Roberto Carlos's "Impossible" Free Kick <i>Real-life spiral example; aerodynamic-dominated versus gravity-dominated ball sports</i>	124
5.5.5	John Paxson, Master of Forces <i>Systematic breakdown of a basketball shot</i>	126
5.6	More Complicated Aerodynamics in Sports <i>Semiquantitative analysis of more complex situations</i>	129
5.6.1	Knuckling <i>Effects of fluctuating orientation and drag</i>	129
5.6.2	Tilting into the Wind: Discus <i>Non-Magnus lift</i>	130
5.6.3	Human Wings: Ski Jumps <i>Lift with adjustable tilt</i>	133
5.6.4	Making the World Safer for Javelin Spectators <i>Changes in javelin design and rules</i>	133
5.6.5	Not So Fast! Polyurethane Swimsuits <i>Drag effects in water and rule changes</i>	134
5.7	Not All Air Is Created Equal <i>Variations in air density and the effect on sports</i>	135
5.7.1	Rocky Mountain (Natural) High <i>Altitude and air density</i>	135
5.7.2	Hot Days are (not) a Drag <i>Temperature and air density</i>	138
5.7.3	It's Not Just the Heat—It's the Humidity <i>Humidity and air density effects</i>	139
5.7.4	Storm Fronts	139
	Collected Equations	139
	Problems	140
6	Game Changers: Collisions in Sports <i>Collisions and momentum</i>	145
6.1	What a Collision Is and How to Think About It <i>Momentum, impulse</i>	145
6.2	The Physics of a Football Tackle <i>Completely inelastic collisions, conservation of momentum</i>	147
6.2.1	The Energy of a Crunch <i>Kinetic energy, energy lost</i>	149
6.2.2	Helmet Design <i>Impulse, relation to force</i>	151
6.2.3	Forcing a Runner out of Bounds <i>2D inelastic collisions</i>	154
6.3	Gentler Pursuits: Bowling <i>Elastic collisions; also isolated and nonisolated systems</i>	156

6.3.1	Beginner's First Roll: Head-on Collision <i>1D elastic collisions</i>	156
6.3.2	Birthday Party Bowling <i>Importance of an isolated system when using momentum conservation</i>	161
6.3.3	Off-Center Hits: Converting a Lily <i>2D elastic collision</i>	162
6.3.4	Off-Center Billiards Shots <i>Special case: 2D elastic collisions for $m_1 = m_2$</i>	165
6.3.5	Beyond Two Dimensions: The Upward Hop of the Pin <i>Impulse and again an isolated system</i>	165
6.4	A Happy Medium: Dribbling and Driving <i>Partially inelastic collisions</i>	167
6.4.1	The Sad, Short Life of the NBA's Synthetic Ball <i>Coefficient of restitution</i>	169
6.4.2	Pádraig Harrington's Drive and Swinging Harder <i>Inelastic collision with finite-mass objects; COR variation with speed</i>	172
6.5	Off-Center Hits: Spinning the Ball <i>Qualitative introduction to torque and spin</i>	177
6.5.1	Bounce Pass <i>Torque from friction; translation and rotation motion</i>	178
6.5.2	Diving Shot <i>Aerodynamic and collisional aspects of topspin</i>	179
6.5.3	Backspin on a Golf Shot <i>Aerodynamic and collisional aspects of backspin</i>	179
	Collected Equations	182
	Problems	183
7	Energy in Sports: Bursts of Power <i>Energy, power, work, efficiency, elasticity</i>	186
7.1	Bouncing Basketball: The Whole Process <i>Conversion of energy; elastic and gravitational energy</i>	186
7.1.1	Heat in Basketball: Not Just for Miami <i>Kinetic to thermal energy</i>	186
7.1.2	Energy During the Bounce <i>Elastic potential energy</i>	187
7.1.3	Details of Energy During the Rise <i>Gravitational potential energy</i>	188
7.2	Efficiency <i>Various definitions</i>	191
7.2.1	The Efficiency of a Basketball Bounce	191
7.2.2	The Efficiency of a Golf Drive	192
7.2.3	Heat Death	193
7.3	The Athlete: The Energetic Starting Point <i>Chemical energy and its conversion</i>	194

7.3.1	The Source of Energy and Its Flow <i>Food energy, Calories</i>	194
7.3.2	The Human Engine I: Energy Conversion <i>Biochemistry of food processing; energy storage</i>	196
7.4	Keeping Score: Energy Accounting in Sports <i>The energy conservation concept and its application to athletes</i>	199
7.4.1	The Water Analogy	200
7.4.2	How Useful is the Energy Conservation Concept Really? <i>In-principle versus practical utility of the concept</i>	201
7.5	Uncle Rico's Hopes Dashed <i>Work, power, and the human engine</i>	203
7.5.1	Work <i>Work–energy theorem; connection to forces</i>	203
7.5.2	Power	205
7.5.3	The Human Engine II: Power <i>Caloric conversion rates</i>	206
7.6	Behdad Salimikordsiabi's Clean and Jerk <i>Quantitative analysis of power lift; details of motion</i>	211
7.6.1	Work During a Lift	211
7.6.2	The Snatch and Clean and Jerk Techniques <i>Details of a complicated set of moves</i>	213
	Collected Equations	219
	Problems	220
8	Energy and Timing in Elastic Equipment <i>Stiffness, timing, elastic energy storage</i>	224
8.1	The Physics of Archery I: Energy Storage and Transfer <i>Hooke's law, efficiency of energy transfer</i>	224
8.1.1	The Arrow's Energy	225
8.1.2	The Bow's Energy <i>Hooke's law</i>	225
8.1.3	Bow and Arrow Efficiency <i>Energy "loss" depends on system details</i>	226
8.2	The Physics of Archery II: Fire Power <i>Oscillation frequency and period</i>	227
8.3	The Physics of Archery III: Archer's Paradox <i>Stiffness of extended rod, timing details</i>	229
8.3.1	Oscillations of an Arrow <i>Characterizing the flexibility of a rod</i>	230
8.3.2	How the Archer's Paradox Works <i>Buckling, matching timing, details</i>	231
8.4	Zdeno Chára's Slap Shot: Fast Storage, Faster Release <i>Energy storage and collisions</i>	234
8.5	Bungee-Jumping Brides and Quadratic Equations <i>Extended example with tension; quadratic equation</i>	237

8.5.1	Dangling Above the Water <i>Tension as an equilibrating force</i>	237
8.5.2	How Low Will He Bounce? <i>Nontrivial energy example and the quadratic equation</i>	238
	Collected Equations	240
	Problems	241
9	The Physics of Cycling <i>Sustained power generation, rolling friction, more aerodynamics, power balance, rotational dynamics, torque</i>	244
9.1	Input to the Bike: Sustained Human Power	246
9.1.1	Caloric Power Requirements for Long-Term Effort <i>Metabolic equivalent task (MET) ratings</i>	246
9.1.2	Oxygen Uptake, VO_2 max, and Power <i>Definition of VO_2 max; rider efficiency</i>	248
9.1.3	Power-to-Weight Ratio <i>PWR</i>	252
9.2	Power Output <i>Power, force, and velocity</i>	253
9.2.1	Hills <i>Gravitational force along a slope</i>	253
9.2.2	Rolling Resistance <i>Dissipation during rolling</i>	255
9.2.3	Wind Drag <i>Drag in still and moving air</i>	256
9.2.4	The Bicycle Power Equation <i>Iterative solution to complicated equations</i>	260
9.2.5	Cycling Versus Other Modes of Transport <i>Comparison of power requirements</i>	263
9.2.6	Drafting <i>Aerodynamics of more than one object</i>	265
9.3	Talansky Drives the Bike <i>Torque and rotational motion</i>	272
9.3.1	Rolling <i>Connection between linear and rotational motion</i>	272
9.3.2	Drivetrain I: Gears <i>Geometry of chain rings, importance of cadence</i>	274
9.3.3	That Annoying 2π : Angular Velocity <i>Angular velocity, the radian</i>	279
9.3.4	Drivetrain II: Chain Action <i>Torque with fixed right-angle lever arm</i>	280
9.3.5	Drivetrain III: Chain Reaction <i>Clarifying Newton's third law</i>	283
9.3.6	Drivetrain IV: Pushing the Pedals <i>Line of action; torque for forces at an angle</i>	284

- 9.3.7 Rolling Friction, Revisited
Torque nature of “rolling friction,” lever arm when line of action is not tangent to edge 287
- 9.3.8 Back to Basics: The Wheel Again
Moment of inertia, angular acceleration, rotational kinetic energy 290

Collected Equations	293
Problems	296

10 Twisting Athletes in Flight

Angular motion with changing moment of inertia, rotation about fixed axes and in free space, conservation of angular momentum **302**

10.1 Human Rotation

Anatomical axes and moments of inertia **303**

10.2 Backward Giant Circle

Torque, energy, rotation around fixed axis **305**

10.2.1 Torques and Spin Rate

Torque changes with lever arm 305

10.2.2 Maximal Force at the Bottom of the Swing

Conservation of energy with rotational motion; centripetal force 306

10.2.3 Swinging to Speed Up 309

10.2.4 Dismount

Angular momentum and conservation 309

10.3 Figure Skating: Spinning on Ice

Angular momentum and work done by “internal” force **312**

10.4 Rotational Action and Reaction

Angular momentum of different body parts **315**

10.4.1 Acrobatics of a Long-Jumper, Revisited

Rotational action/reaction about the transverse axis 315

10.4.2 Throwing, Kicking, Twisting

Rotation and counterrotation along the longitudinal axis 316

10.4.3 Balance Beam

Rotation and counterrotation about the anteroposterior axis 317

Collected Equations	318
Problems	319

Part II Supplementary Chapters **321**

11 Lines of Action on the Line of Scrimmage: The Torque Wars 322

12 A Barry Bonds Home Run

Ball-bat collisions **326**

12.1 Ball–Bat Collision: Speeds, Impulse, Force **326**

12.2 Batted Ball Speed (BBS) **329**

12.3 Focus on the Bat	
<i>Collision with an extended object</i>	330
12.3.1 Bonds's Swing	330
12.3.2 The Bat as an Extended Object	
<i>Sweet spot, vibrations, effective mass</i>	331
Collected Equations	334
13 The Pole Vault	335
13.1 Origins	335
13.2 The Modern Event	335
13.2.1 Performance Progression	335
13.2.2 Contributions to Height	337
13.3 Pole Vault 101: Energy Flow	338
13.3.1 Energy-Based Estimate of Vaulting Height	338
13.3.2 What Matters in the Simple Calculation	340
13.4 Pole Vault 102: Beyond Energy Flow	341
13.4.1 Maximizing Initial Energy: Carry Weight	342
13.4.2 Minimizing Inelastic Energy "Loss"	344
13.4.3 Fully Exploiting the Energy: Flexibility and Timing	347
13.4.4 Work Done by the Athlete	349
14 Is It Better to Run through First Base or to Dive?	351
14.1 The Story according to <i>Sport Science</i>	351
14.2 Too Close to Call	353
14.3 Diving Speed	354
14.3.1 "50% Deceleration"	355
14.3.2 Newton's First Law and Air Drag	355
14.4 What's Really Happening: Torque and Impulse	356
14.5 Other Issues	358
14.6 Concluding Remarks	359
A Unit Conversions	360
B Tables of Relevant Physical Properties	362
Further Reading	367
Answers to Odd-Numbered Problems	372
Index	376
