About the authors	xi
Acknowledgements	xiv
Preface	xv
Foreword	xvi
How to use this book	xvii
Overview of content	xvii
How this book progresses through the content	xix
PART I THEORETICAL APPROACH	I
CHAPTER 1 An introduction to developmental psychology	3
Introduction	4
Why a South African text if development is universal?	4
Orientation of the book: A socio-cultural focus of development-in-context	5
What is developmental psychology?	8
Why do psychologists study development?	8
Central issues of developmental psychology	9
Continuity or discontinuity in development	9
Plasticity	9
Nature <i>and</i> nurture as sources of development	11
The history of developmental psychology	15
Empiricism and rationalism: The history of developmental ideas	15
How do psychologists study development?	18
Research methods in developmental psychology	19
Ethical concerns when working with children	24
Conclusion	26
References	26
CHAPTER 2 Theories of development	28
Introduction	29
Theories of development	29
Biological views	29
Psychodynamic views	30
The behaviourist paradigm	34
Cognitive development and learning	36
Conclusion	50
References	51

PART II STAGES OF DEVELOPMENT	53
CHAPTER 3 Prenatal	55
Introduction	56
Life-cycle theories	56
The prenatal period	56
Taking into account the influence of culture	57
Key issues	58
The nature versus nurture debate	58
The question of whether development is continuous or discontinuous	58
The function of fetal behaviour	58
Physical development	58
The three stages of the prenatal period	59
Principles that guide prenatal development	62
Brain development	63
Genetic abnormalities	66
Environmental influences on development	68
Fetal origins hypothesis	72
Behaviour of the fetus	75
Fetal movement	75
Fetal senses	77
Somatosensory stimuli	79
Fetal learning	80
Functions of behaviour	81
Birth and labour	82
Preparation for birth	83
Labour and birth	83
Survival after birth	84
Reflexes	84
Newborn senses	86
Conclusion	87
References	88
CHAPTER 4 Infancy	91
Introduction	92
Physical development	92
Body growth	92
Motor development	94
Brain development	95
Feeding and malnutrition	97
Sleeping	99
Cognitive development	100
Piaget's theory of cognitive development	100

Early memory	105
Social interaction and cognitive development	106
The beginnings of language	107
Before the first words	108
Recognising language sounds	108
The first words	110
Telegraphic speech	110
Explaining language development: Biological and environmental influences	111
Psychosocial development	113
Temperament	113
Infants' early capacities	115
Attachment	118
Self-awareness and independence	125
Conclusion	127
References	128
CHAPTER 5 Early childhood	133
Introduction	133
The developing child	134
Unpacking developmental psychology	135
Piaget's conception of cognitive development in early childhood	136
Pre-operational thought	136
Concrete operational stage	137
Vygotsky's socio-cultural or cultural–historical approach to development	138
Self-regulation and 'play' as a leading activity	138
The Griffiths Scales of Mental Development	144
The basic avenues of learning	145
Moral development in children	149
Theory of moral development	150
Kohlberg's work on moral reasoning	151
Developing empathy in children	156
Film as an instrument of moral development	157
Conclusion	158
References	160
CHAPTER 6 Middle childhood	163
Introduction	164
Physical development	164
Body growth	165
Motor development	165
Brain development	167

Cognitive development	168
Piaget's concrete operational stage	168
Memory	170
Problem solving	173
Other cognitive development	173
Schooling and cognitive development	174
The family	177
Changing relationships with parents	177
The influence of siblings	178
Variety in family life	179
Peer relationships	184
Peer acceptance and popularity	185
Friendship	188
Bullying	188
Psychosocial development	190
Moral development	190
A new sense of self	195
Conclusion	198
References	199
CHAPTER 7 Adolescence	203
Introduction	204
The 'terrible teens'?: Views of adolescence	204
Physical development	206
Puberty	206
Brain development	209
Cognitive development	210
Piaget's formal operations	210
Information processing	211
Schooling	213
Psychosocial development	215
The family	215
Peer relationships	219
Moral development	224
Development of the self	233
Conclusion	239
References	239
PART III CONTEXTUALISING CONTEMPORARY THEMES IN CHILDHOOD DEVELOPMENT	245
CHAPTER 8 Children and childhood in South Africa	247
Introduction	248
Conceptualisation of children and childhood	249

Social construction of childhood	250
Childhood and biological factors	250
Generational space and childhood	251
Children as social agents	252
Children as citizens	252
Childhood indicators	253
Childhood and well-being	253
Children's conceptualisation of well-being	254
Fear as indicator of children's well-being	255
Vulnerability	256
Poverty and neglect	256
Disease and illness	256
Abuse and neglect	257
Resilience	257
Family and childhood	258
Family factors that contribute to child learning and development	258
Children exist in a system: System theory	260
Law and childhood	262
Universality of law	263
Children's rights	263
Conclusion	267
References	267
CHAPTER 9 Career development in children	269
Introduction	270
Childhood development and childhood career development	271
Childhood career development theories	274
Super's lifespan lifespace theory	275
Gottfredson's theory of circumscription and compromise	276
More recent theories	276
Research on childhood career development in South Africa	277
Linking childhood development and childhood career development in South Africa	280
Conclusion	284
References	284
CHAPTER 10 Poverty, adversity, and resilience	287
Introduction	288
Poverty in South Africa	288
Poverty created by apartheid and colonialism and their legacies	289
Poverty is not random and occurs in the context of inequality	291
Poverty and human development	293
Poverty and adverse circumstances often create a downward spiral of destitution	293

Poverty sometimes creates conditions which make escape from it difficult	293
Short-term survival is sometimes prioritised at the cost of escape from long-term poverty	293
While income and assets are important, they seldom give a complete picture of poverty	294
Psychology and poverty	295
Psychology and poverty in South Africa	296
Poverty, children, and human development	298
Economic mobility is a product of caregivers' individual agency and the larger structural context	299
The process in the larger structural context differ for different kinds of poor and vulnerable children	299
At critical periods during the human life course, negative events have especially damaging effects	299
Poverty, inequality and vulnerability	300
Resilience	300
Resilience and human development	301
Conclusion	304
References	305
CHAPTER 11 Children and violence in South Africa	307
Introduction: Development in the context of violence	308
Žižek and the nature of modern violence: 'Stepping back'	311
Three kinds of violence: Subjective violence, objective violence, and systemic violence	311
Violence as the life-force that animates the everyday	312
Repudiating violence: 'Learn, learn, learn'	312
Ghandi and the ontologies of violence	314
A socio-cultural approach to understanding violence in South Africa	315
South African male discourses: The context	318
South African male discourses of violence: The pragmatics of restraint	321
The personal	321
The larger context	324
Conclusion	327
References	328
Chapter 12 Health barriers that impede childhood development	330
Introduction	331
Developmental, cognitive and scholastic barriers that impede progress	331
Barriers or factors relevant to primary-school children	331
Health barriers relevant to primary-school children	332
Poor attendance at school	334
Specific learning disabilities	335

Low general cognitive ability	336
Attention deficit and hyperactivity disorder	336
Barriers or factors relevant to high-school children	337
Factors that were present at primary school, but had limited impact in that context	337
Limited motivation and excessive free time	337
Drugs, clubs, gangs, and peer pressure	337
Emotional disorders of adolescence, especially depression and anxiety	338
A low level of language acquisition and an emphasis on auditory processes	338
Further deficits	338
Health barriers caused by cultural and contextual factors	339
Rural–urban relocation	340
Environments that reduce children's safety and freedom to interact and play socially without fear	340
Socio-economic status	340
The civil status of women	341
Employment issues with regard to women	342
Malnutrition	342
Fetal alcohol spectrum disorder	343
Health barriers such as Aids and other chronic conditions	344
HIV and Aids	344
Brain injury	346
Early childhood education in the South African context	349
Conclusion	352
References	353
Glossary	355
Index	369
