Contents

<i>Foreword</i>	x
<i>Introduction</i>	xiii
1 The History of Hyaluronic Acid Discovery, Foundational Research and Initial Use	1
1.1 Discovery	1
1.2 Foundational Research	2
1.3 Initial Medical Applications	3
1.4 Sources of Hyaluronan	4
1.5 Current Medical Study and Use	6
1.6 Impact and Future Directions	7
References	7
2 The Biological Role of Hyaluronic Acid	9
2.1 Hyaluronic Acid Phylogenesis	9
2.1.1 Polysaccharide Structure and the Problems of Phylogenesis	13
2.1.2 Physico-Chemical and Functional Differences of Polysaccharides	18
2.1.3 Biochemical Features of Hyaluronic Acid and Other Glycosaminoglycans	20
2.2 Functions of Hyaluronan in Human Ontogenesis	22
2.2.1 Role of Hyaluronic Acid in Fertilization	22
2.2.2 Hyaluronan and Other Glucosaminoglycans in Cell Division, Migration and Differentiation	25
2.2.3 Hyaluronic Acid and Sulfated Glycosaminoglycans in Maintaining a Differentiated Status of Cells	33
2.2.4 Hyaluronan and Induction of Cellular Cycles for Differentiated Cells	35
2.2.5 The Source of Hyaluronic Acid's Functional Properties and the Dynamics of its Synthesis and Degradation	44
2.2.6 The Rules of Biopolymer Functional Cleavage	52
2.3 Hyaluronan Signalling Systems	53
2.4 Hyaluronan Functions in the Extracellular Matrix	59
2.4.1 Extracellular Space	60
2.4.2 Composition and Functioning of the Extracellular Matrix	60
2.4.3 The Role of Hyaluronan in Transportation of Substances through the Extracellular Matrix: Diffusion, Osmosis, Electro-Osmosis and Vesicular Transportation	63
2.4.4 Hyaluronan in the Extracellular Matrix of Different Connective Tissues	65
References	67

3	Methods of Hyaluronic Acid Production	77
3.1	Hyaluronan Sources and Extraction	77
3.1.1	Hyaluronan Production from Animal Sources: General Methods	77
3.1.2	Hyaluronan Purification	78
3.1.3	The Chemical Production of Hyaluronan from Chicken Combs	81
3.1.4	HA Production for Ophthalmology	82
3.2	Bacterial Methods of Hyaluronic Acid Production	84
3.3	Hyaluronan Destruction during Production, Storage and Sterilization	85
3.4	Enzymatic Destruction of Hyaluronan	86
3.4.1	Hyaluronidase Classification	86
3.4.2	Properties and Functions of Hyaluronidases	87
3.5	Non-Enzymatic Destruction of Hyaluronan	88
3.5.1	Acid-Base Hydrolysis of Hyaluronan	88
3.5.2	Oxidation-Reduction Depolymerization of Hyaluronan	88
3.6	Quality of Hyaluronan Commercial Products of Animal and Bacterial Origin	89
	References	92
4	Molecular and Supramolecular Structure of Hyaluronic Acid	97
4.1	Primary Structure of Hyaluronic Acid	97
4.2	Structure of Hyaluronan in Solution	101
4.3	Rheological Properties of Hyaluronic Acid	104
	References	116
5	Chemical Modifications, Solid Phase, Radio-Chemical and Enzymatic Transformations of Hyaluronic Acid	121
5.1	Main Characteristics of Cross-Linked Hydrogels	122
5.2	Methods of Hyaluronic Acid Cross-Linking	124
5.2.1	Cross-Linking with Carbodiimides	124
5.2.2	Cross-Linking with Aldehydes	126
5.2.3	Cross-Linking with Divinylsulfone	126
5.2.4	Cross-Linking by the Ions of Polyvalent Metals	127
5.2.5	Cross-Linking with Epoxides	127
5.2.6	Photo-Cross-Linking	128
5.2.7	Solid-State Cross-Linking under High Pressure and Shear Deformation (Solid-State Reactive Blending: SSRB)	130
5.3	Radiochemical Transformations (Radiolysis) of Hyaluronan Aqueous Solutions	134
	References	137
6	Medical Applications of Hyaluronan	143
6.1	Hyaluronan and Aesthetic Medicine	143
6.1.1	Intradermal Hyaluronan-Based Microimplants	143
6.1.2	Cross-Linking of Hyaluronan into a Three-Dimensional Network	144

6.1.3	Hyaluronic Acid in Injection Cosmetology (Biorevitalization)	150
6.1.4	Molecular Weight of Hyaluronan in Biorevitalization Products	151
6.1.5	Antioxidant Efficiency of Hyaluronan and other Biologically Active Compounds as Potential Products for Aesthetic Medicine	154
6.1.6	Bio-Repairants as a New Class of Injectable Products Based on Hyaluronic Acid Modified with Low Molecular Weight Bio-Regulators	161
6.2	Hyaluronan in Arthrology	170
6.3	Hyaluronan in Ophthalmology	176
6.4	Hyaluronan in Oncology	176
6.5	The Role of Hyaluronan in Healing Wounds	183
6.6	Hyaluronan in Immunology	186
	References	186
	<i>Conclusion</i>	193
	<i>Index</i>	195
