

# UNLOCKING CONSCIOUSNESS

**Lessons from the Convergence of Computing  
and Cognitive Psychology**

**Charles T. Ross**

*British Computer Society, UK*

 **World Scientific**

NEW JERSEY • LONDON • SINGAPORE • BEIJING • SHANGHAI • HONG KONG • TAIPEI • CHENNAI • TOKYO

# CONTENTS

<i>Preface</i>	ix
<i>About the Author</i>	xiii
<i>Introduction</i>	xxxix
<i>Philosophy</i>	xxxv
<b>Part I Convergence</b>	<b>1</b>
<b>Chapter One Contribution of Computers: Predator or Partner?</b>	<b>3</b>
The First Known Mechanical Calculator — First Century BC	4
The Abacus	4
Mills	4
Clocks	5
Beginning of Automation	5
Automatic Organ Music	5
Steam Power	6
The Babbage Difference Engine	6
Tabulators	6
Electronics	7
Overture	7
Why Does This Help Us Understand How Our Brain and Mind Work?	9

The First Act of the Computer Revolution	9
Computers Come of Age	10
The Second Act of the Computer Revolution	11
Telecommunications and the Beginning of Coding Systems	11
Computer Terminals	12
Parallel Programming	12
Convergence of Technologies	13
Software	14
Solving the Difficulties of Programming	14
Programming Languages	15
Compiled Programs	16
Interpreted Programs	16
Multitasking	17
Early Programming	18
Memory Systems	18
Packet Switching	19
Operating Systems	20
Implications of Online Real-Time Continuous Processing	21
Search for Artificial Intelligence	22
Convergence of Computing	23
Brain Mind Duality	24
Information	25
There is One Last, Rather More Subtle Comparison	26
<b>Chapter Two State of the Art: Cognitive Neuroscience</b>	<b>29</b>
The Central Nervous System	30
Autonomic Functions	30
Neurons	31
Power Supply	31
Signal Strength	32
Functions of the Background Operating System	33
The Autonomic Functions of the Central Nervous System	33
The Brain Mind	34
Learning System	36

Representation of Information in the Brain and Mind	36
At Birth, There is No Information in the Brain	37
Sensations	38
The Instructions in the Brain at Birth	38
Background Operating System	39
Can This Be?	40
The Cardiovascular System	42
The Endocrine System	42
Immune System	44
Gastrointestinal (Enteric) System	44
Summary	44
<b>Chapter Three Ideas, Past, Present and Future</b>	<b>47</b>
Milestones in Human Cognition	48
Early Reliance on Natural Resources	49
Birth of Cognitive Neuroscience	50
Communication Systems in the Body	50
Operating Systems	52
Contribution of Computing	52
Software	53
Systems	53
Emotions, Perceptions and Sensations	54
Synapses	54
Symbiosis and Prosthetics	55
Convergence	55
Biogenetics	55
DNA, Gene Editing, Health?	57
Synthetic Biology	57
Artificial Intelligence: The Tantalising Prospect of Building Intelligent Systems	58
Robots	58
Effect of Computing on Economics: Reversing the Industrial Revolution	58
Education	59

Natural Resource of the Future	59
Paradox	60
Next Steps	61
Objectives	61
Growing Research Effort	62
The Potential	62
The Risks	63
Connections and Interfaces	63
Symbiotic Computing	63
Prosthetics	63
Gene Editing	64
Synthetic Biology	64
The Rainbow of Human Ability	65
Convergence: Guide to Intelligence	66
<b>Part II Information</b>	<b>69</b>
<b>Chapter Four Sources of Information</b>	<b>71</b>
Background	71
Science of Information	72
Information: Indispensable Resource	74
Working Definition of Information	75
Categories of Information	75
Two States	77
Meaning of Information	77
Attributes of the Structure of Information	78
Information as Hardware and Software	78
Information as Catalyst	79
Evolution of Information in Humans (Cognitive Neuroscience)	79
<b>Chapter Five Language</b>	<b>81</b>
Arrival of Speech	82
Neural Precision	84
Cross References: Relationships	84

Abstract Words	85
First Major Expansion (1)	86
Writing: The Second Expansion (2)	86
Drafting Skills	87
Spelling	88
Complexity	88
First Schools	88
Role of Text	89
The Information Stored in Memories	89
Plasticity	90
The Third Expansion (3) of Neural Information Processing: Thinking and Creativity	90
The First Steps in Transferring Information to the Brain	92
<b>Chapter Six Representation of Information</b>	<b>93</b>
Representation (Form) of Information	93
Representation of Words	94
Silent Speech	95
Structure of Every Word	96
Language Translation	97
The Poetry Effect	98
Representation of Abstract Ideas, Concepts, Thoughts, Imagination and Prediction	99
Representation and Computation of Numbers	101
Learning to Count — Early Numbers	102
Roman Numerals	103
There Are No Numbers in the Brain, Mind	105
Visual Arts	106
Recognising Differences	108
Transmitting Thoughts	108
Orienteering	108
Sound of Music	109
Pythagoras	109
Bandwidth	111
Drama, Analogy, Story and Parable	111

<b>Chapter Seven</b>	<b>Memory &amp; Learning</b>	<b>115</b>
	In the Beginning...	115
	Five Senses	116
	Initial Processing Needs Memory	116
	The Brain Has Evolved as a Learning System	117
	Recent Research	118
	Minimal Memory	118
	More Sophisticated Memory	118
	Growing Neural Memories	119
	Description of the Formation of Memory	119
	Statistics	120
	Two Types of Information	121
	Facts and Actions	121
	Short-term Memory?	122
	Other Factors	123
	Information Recall is a Subject on Its Own	123
	Relational Databases	124
	Multimedia	125
	Synaesthesia	126
	Physical Memory, Synaptic Timing	126
	Learning and Teaching	126
	Massive Open Online Courses (MOOCS)	127
	Technology and Psychology	128
	Computing and Languages	128
	Function of Education	129
	Learning and Being Taught	130
	Prize	130
	Methods of Supporting Memory Formation	130
	Osmosis	131
	Learning versus Creativity	132
	Sequence of Events	133
	Energy	133
	Dementia	134
	Senior Moment Syndrome	135
	Forgetting	136

<b>Chapter Eight</b>	<b>Meaning</b>	<b>137</b>
	Flow of Information	138
	Dictionary Meaning of Words	139
	Abstract Words	139
	Evolution of Meaning	139
	Hormones	140
	Language of the Endocrine System	140
	Definition of Meaning	140
	Four Types of Meaning	140
	Other Aspects of Meanings	141
	Patterns of Information	142
	Meaning as Part of the Process of Learning	143
	Indexes	143
	Icons and Symbols	145
	Evolution of Neurons?	146
	Unlearning: Forgetting	147
	Cumulative Learning	147
	Diverse Ways of Learning	148
	Location	149
	Statistical Regularities	149
	Programming	149
	Systems Design	150
	Meaning of Space, Time and Orientation	150
	Dreaming and Imagination	152
	Summary	152
<b>Part III</b>	<b>Intelligence</b>	<b>155</b>
<b>Chapter Nine</b>	<b>Summary of the Evolution of Intelligence</b>	<b>157</b>
	Alternative Approaches to the Problem	158
	Etymology	159
	Intelligent and Intelligently	159
	Relative and Abstract	160
	A Selection of Current Definitions	160
	An Alternative Perspective	161

Intelligence is a System	162
All the Myriad Definitions Proposed Have One Thing in Common	162
Source and Foundation of Intelligence	163
Ability to Respond...	163
...To Incomplete Information...	164
...As Fast as Possible	164
History	165
The Mind at Its Best: A Greek View	165
Mind at Its Best: The Industrial Revolution	166
Mind at Its Best: Late Twentieth Century	166
Summary	169
<b>Chapter Ten General and Responsive Intelligence</b>	<b>171</b>
Growing the Modern Brain Mind	171
Learning	172
The Autonomic Functions of the Central Nervous System	174
Examples	174
Duality	175
Variety of Definitions	176
In Control 24/7	176
History	178
Theory of General Intelligence or “g”	178
Responsive Intelligence	180
Other Sentient Systems	182
Sensory Organs	182
Selective Concentration	182
Evolving Abilities	183
Physical Dexterity	183
Everyday Operation	184
Language, Linguistics and Semantics	185
One of the Fundamental Attributes of All Intelligence: Systems	185
Deconstructing Definitions	186

Speed	188
Experience and Support	188
Recognition	188
Five Senses	189
Language	189
Music	190
Text	190
Evaluation	191
<b>Chapter Eleven Acquisitive and Creative Intelligence</b>	<b>193</b>
Acquisitive Intelligence	193
Creative Intelligence	196
Thinking of New Ideas, Concepts and Solutions:	
Neural Processing	197
How Do We Set About Thinking About How We Create	
New Ideas <i>Ab Initio</i> ?	198
Self-Organising Systems	199
What Tools Do We Have to Achieve This Feat?	200
The Evolutionary Foundation of Thinking	200
Turing Universal Machine	201
Over the Past Few Thousand Years We Have Developed	
a Rather Similar Facility	203
Writing	204
Silent Speech: The Language of Creative	
Intelligence	205
Thinking	205
Thinking in Modalities	206
Unlimited Capacity	207
Logic versus Innovation	208
<b>Chapter Twelve Physical, Emotional, Holistic and Medical Intelligence</b>	<b>211</b>
Physical Intelligence	211
Sport as a Full-Time Career	212
Emotional Intelligence	214

Across a Crowded Room Effect	214
Drive and Enthusiasm	215
Elation, Depression and Stress	216
Strength of Formation and Accessing of Memory	217
External Relationship Intelligence: Mirror Neurons	217
Holistic Intelligence	217
Medical Intelligence	219
Acupuncture, Ancient and Modern	220
Psychosomatic Illness	220
Placebo and Will Power	221
Hypnosis	221
The Discovery of DNA Has Opened Up a Whole New Science	221
Sophistication of Drugs	222
Tailoring Drugs to Individuals: Genetic Engineering	222
Future Perfect	223

### **Chapter Thirteen Measurement, Implications and Extrapolation of Intelligence 225**

Measurement of Intelligence, Aptitude and Ability	225
Longitudinal Studies	227
Games or Reality?	228
Comparative, Not Absolute	228
Birth Skills	228
General Intelligence, a Stable Quotient	229
Application Intelligence	229
Speed	230
Alternative Measurements of Speed of Intelligence	
Reactions	230
Synapses	231
Other Tests and Selection Systems	232
Way Forward	233
Influences on Neural Performance	234
Diet and Nutrient Path	234
Energy	234

Efficiency	235
Other Factors	235
Learning from Experience	236
Autonomic Monitoring System	237
Programming Our Robots	237
Reinforcement (Learning) versus Innovation (Thinking)	237
Birth of Thinking	238
Concentration	239
Personality Traits	239
Long-term Over Short-term Gain	239
Follow a Logical Argument	239
Boundaries	240
Orientation	240
Is Intelligence a Fixed or Learnable Skill?	241
Implications of Aging on Intelligence	243
Pluses	243
Minuses	244
The Mechanism of Memory Recall	245
Palliative Exercises	245
Measuring Memory Formation	246
Variant Brain Types and Intelligence	246
Left and Right Brain Debate	247
Major Variations in Personality	247
A Word About Qualia	248
Repository of All Human Knowledge	249
We Now Have a New Opportunity	251

**Chapter Fourteen The Many Languages and Powerful Tools of the Body 253**

Languages of the Hormones (Chemical Neuroscience)	253
Verbal Language	253
The Language of the Hormones	254
The Language of Chemical Cognitive Neuroscience:	
A New Field of Research	254
Musical Languages	255

Mathematic and Scientific Languages	255
Body Language	255
Programming	256
Robots	256
Tools of Intelligence in the Body	256
Emergence	256
Sound Bites: Jargon, Icons	256
Positioning and Sequences	257
Simplicity and Clarity	257
Hierarchies in Processing Neural Signals	257
What Do Neurons Transmit?	259
Neural Behaviour	259
How Neurons Invent Jet Engines	260
<b>Chapter Fifteen</b> <b>Definitions of Intelligence</b>	<b>261</b>
The Architecture and Relationship of Information and Intelligence	263
General and Reactive Intelligence	263
Acquisitive Intelligence	264
Creative Intelligence	264
Physical Intelligence	264
Emotional Intelligence	265
Holistic Intelligence	265
Medical Intelligence	265
Neural Modules (Neurules)	265
Neurons Generate Meaning	265
Potential Information	265
Kinetic Information	266
<b>Part IV</b> <b>Consciousness</b>	<b>267</b>
<b>Chapter Sixteen</b> <b>Understanding Consciousness</b>	<b>269</b>
All Knowledge is Provisional	269
Perceptions of Consciousness	269
Consciousness	269
The Current “Standard Model” of Sleep and Consciousness	271

Brain Functions	271
Perceptions of Sleep	271
Priority in a Crisis	272
Mind Functions	273
Consciousness	273
Coordination	274
Dreaming	275
Short-form Definitions	276
Power Supply	277
The Cycles of Consciousness and Sleep	277
Conscious Wakeful Awareness	279
Unconsciousness and Asleep	279
Subconscious	280
Definition of Consciousness, Awake, Aware and Asleep	280
Functions of the Mind	280
Functions of the Brain	280
Detail and Amplification	280
Exploring Sensations, Perceptions, Impressions and Emotions	282
Synchronised Waves of Meta Neuron Networks	283
Functions of Consciousness	284
Memories and Availability of Information	284
Abstract Thinking and Prediction	284
Unlimited Capacity	286
Monitoring: Feedback	286
Characteristics of Personality and Temperament	287
Thinking and Reasoning	287
Recursion: The Last Piece of the Jigsaw	288
Summary	289
<b>Chapter Seventeen Thinking, Knowledge and Creativity</b>	<b>291</b>
The Implications of the Fourth Dimension	291
Constructive Tension of Conservers and Reformers	293
Learning to Think	294
Thinking Can Counter Stress	295
Emergence	296
