<i>Preface</i>	vii
1 Introduction	1
1.1 Motivation: Scattered Data Interpolation in \mathbb{R}^s	2
1.1.1 The Scattered Data Interpolation Problem	2
1.1.2 Example: Interpolation with Distance Matrices	4
1.2 Some Historical Remarks	13
2 Radial Basis Function Interpolation in MATLAB	17
2.1 Radial (Basis) Functions	17
2.2 Radial Basis Function Interpolation	19
3 Positive Definite Functions	27
3.1 Positive Definite Matrices and Functions	27
3.2 Integral Characterizations for (Strictly) Positive Definite Functions	31
3.2.1 Bochner's Theorem	31
3.2.2 Extensions to Strictly Positive Definite Functions	32
3.3 Positive Definite Radial Functions	33
4 Examples of Strictly Positive Definite Radial Functions	37
4.1 Example 1: Gaussians	37
4.2 Example 2: Laguerre-Gaussians	38
4.3 Example 3: Poisson Radial Functions	39
4.4 Example 4: Matérn Functions	41
4.5 Example 5: Generalized Inverse Multiquadrics	41
4.6 Example 6: Truncated Power Functions	42
4.7 Example 7: Potentials and Whittaker Radial Functions	43
4.8 Example 8: Integration Against Strictly Positive Definite Kernels	45

4.9	Summary	45	11.3	Wu's Compactly Supported Functions	88
5	Completely Monotone and Multiply Monotone Functions	47	11.4	Oscillatory Compactly Supported Functions	90
5.1	Completely Monotone Functions	47	11.5	Other Compactly Supported Radial Basis Functions	92
5.2	Multiply Monotone Functions	49	12	Interpolation with Compactly Supported RBFs in MATLAB	95
6	Scattered Data Interpolation with Polynomial Precision	53	12.1	Assembly of the Sparse Interpolation Matrix	95
6.1	Interpolation with Multivariate Polynomials	53	12.2	Numerical Experiments with CSRBFs	99
6.2	Example: Reproduction of Linear Functions Using Gaussian RBFs	55	13	Reproducing Kernel Hilbert Spaces and Native Spaces for Strictly Positive Definite Functions	103
6.3	Scattered Data Interpolation with More General Polynomial Precision	57	13.1	Reproducing Kernel Hilbert Spaces	103
6.4	Conditionally Positive Definite Matrices and Reproduction of Constant Functions	59	13.2	Native Spaces for Strictly Positive Definite Functions	105
7	Conditionally Positive Definite Functions	63	13.3	Examples of Native Spaces for Popular Radial Basic Functions	108
7.1	Conditionally Positive Definite Functions Defined	63	14	The Power Function and Native Space Error Estimates	111
7.2	Conditionally Positive Definite Functions and Generalized Fourier Transforms	65	14.1	Fill Distance and Approximation Orders	111
8	Examples of Conditionally Positive Definite Functions	67	14.2	Lagrange Form of the Interpolant and Cardinal Basis Functions	112
8.1	Example 1: Generalized Multiquadrics	67	14.3	The Power Function	115
8.2	Example 2: Radial Powers	69	14.4	Generic Error Estimates for Functions in $\mathcal{N}_\Phi(\Omega)$	117
8.3	Example 3: Thin Plate Splines	70	14.5	Error Estimates in Terms of the Fill Distance	119
9	Conditionally Positive Definite Radial Functions	73	15	Refined and Improved Error Bounds	125
9.1	Conditionally Positive Definite Radial Functions and Completely Monotone Functions	73	15.1	Native Space Error Bounds for Specific Basis Functions	125
9.2	Conditionally Positive Definite Radial Functions and Multiply Monotone Functions	75	15.1.1	Infinitely Smooth Basis Functions	125
9.3	Some Special Properties of Conditionally Positive Definite Functions of Order One	76	15.1.2	Basis Functions with Finite Smoothness	126
10	Miscellaneous Theory: Other Norms and Scattered Data Fitting on Manifolds	79	15.2	Improvements for Native Space Error Bounds	127
10.1	Conditionally Positive Definite Functions and p -Norms	79	15.3	Error Bounds for Functions Outside the Native Space	128
10.2	Scattered Data Fitting on Manifolds	83	15.4	Error Bounds for Stationary Approximation	130
10.3	Remarks	83	15.5	Convergence with Respect to the Shape Parameter	132
11	Compactly Supported Radial Basis Functions	85	15.6	Polynomial Interpolation as the Limit of RBF Interpolation	133
11.1	Operators for Radial Functions and Dimension Walks	85	16	Stability and Trade-Off Principles	135
11.2	Wendland's Compactly Supported Functions	87	16.1	Stability and Conditioning of Radial Basis Function Interpolants	135
			16.2	Trade-Off Principle I: Accuracy vs Stability	138
			16.3	Trade-Off Principle II: Accuracy and Stability vs Problem Size	140
			16.4	Trade-Off Principle III: Accuracy vs Efficiency	140
			17	Numerical Evidence for Approximation Order Results	141
			17.1	Interpolation for $\varepsilon \rightarrow 0$	141
			17.1.1	Choosing a Good Shape Parameter via Trial and Error	142

17.1.2	The Power Function as Indicator for a Good Shape Parameter	142	23.1	Shepard's Method	205
17.1.3	Choosing a Good Shape Parameter via Cross Validation	146	23.2	MLS Approximation with Nontrivial Polynomial Reproduction	207
17.1.4	The Contour-Padé Algorithm	151	24.	MLS Approximation with MATLAB	211
17.1.5	Summary	152	24.1	Approximation with Shepard's Method	211
17.2	Non-stationary Interpolation	153	24.2	MLS Approximation with Linear Reproduction	216
17.3	Stationary Interpolation	155	24.3	Plots of Basis-Dual Basis Pairs	222
18.	The Optimality of RBF Interpolation	159	25.	Error Bounds for Moving Least Squares Approximation	225
18.1	The Connection to Optimal Recovery	159	25.1	Approximation Order of Moving Least Squares	225
18.2	Orthogonality in Reproducing Kernel Hilbert Spaces	160	26.	Approximate Moving Least Squares Approximation	229
18.3	Optimality Theorem I	162	26.1	High-order Shepard Methods via Moment Conditions	229
18.4	Optimality Theorem II	163	26.2	Approximate Approximation	230
18.5	Optimality Theorem III	164	26.3	Construction of Generating Functions for Approximate MLS Approximation	232
19.	Least Squares RBF Approximation with MATLAB	165	27.	Numerical Experiments for Approximate MLS Approximation	237
19.1	Optimal Recovery Revisited	165	27.1	Univariate Experiments	237
19.2	Regularized Least Squares Approximation	166	27.2	Bivariate Experiments	241
19.3	Least Squares Approximation When RBF Centers Differ from Data Sites	168	28.	Fast Fourier Transforms	243
19.4	Least Squares Smoothing of Noisy Data	170	28.1	NFFT	243
20.	Theory for Least Squares Approximation	177	28.2	Approximate MLS Approximation via Non-uniform Fast Fourier Transforms	245
20.1	Well-Posedness of RBF Least Squares Approximation	177	29.	Partition of Unity Methods	249
20.2	Error Bounds for Least Squares Approximation	179	29.1	Theory	249
21.	Adaptive Least Squares Approximation	181	29.2	Partition of Unity Approximation with MATLAB	251
21.1	Adaptive Least Squares using Knot Insertion	181	30.	Approximation of Point Cloud Data in 3D	255
21.2	Adaptive Least Squares using Knot Removal	184	30.1	A General Approach via Implicit Surfaces	255
21.3	Some Numerical Examples	188	30.2	An Illustration in 2D	257
22.	Moving Least Squares Approximation	191	30.3	A Simplistic Implementation in 3D via Partition of Unity Approximation in MATLAB	260
22.1	Discrete Weighted Least Squares Approximation	191	31.	Fixed Level Residual Iteration	265
22.2	Standard Interpretation of MLS Approximation	192	31.1	Iterative Refinement	265
22.3	The Backus-Gilbert Approach to MLS Approximation	194	31.2	Fixed Level Iteration	267
22.4	Equivalence of the Two Formulations of MLS Approximation	198	31.3	Modifications of the Basic Fixed Level Iteration Algorithm	269
22.5	Duality and Bi-Orthogonal Bases	199	31.4	Iterated Approximate MLS Approximation in MATLAB	270
22.6	Standard MLS Approximation as a Constrained Quadratic Optimization Problem	202	31.5	Iterated Shepard Approximation	274
22.7	Remarks	202			
23.	Examples of MLS Generating Functions	205			

32	Multilevel Iteration	277	40 1	Symmetric Collocation Method	365
32.1	Stationary Multilevel Interpolation	277	40 2	Summarizing Remarks on the Symmetric and Non-Symmetric Collocation Methods	372
32.2	A MATLAB Implementation of Stationary Multilevel Interpolation	279	41	Collocation with CSRBFs in MATLAB	375
32.3	Stationary Multilevel Approximation	283	41.1	Collocation with Compactly Supported RBFs	375
32.4	Multilevel Interpolation with Globally Supported RBFs	287	41.2	Multilevel RBF Collocation	380
33	Adaptive Iteration	291	42	Using Radial Basis Functions in Pseudospectral Mode	387
33.1	A Greedy Adaptive Algorithm	291	42.1	Differentiation Matrices	388
33.2	The Faul-Powell Algorithm	298	42.2	PDEs with Boundary Conditions via Pseudospectral Methods	390
34	Improving the Condition Number of the Interpolation Matrix	303	42.3	A Non-Symmetric RBF-based Pseudospectral Method	391
34.1	Preconditioning: Two Simple Examples	304	42.4	A Symmetric RBF-based Pseudospectral Method	394
34.2	Early Preconditioners	305	42.5	A Unified Discussion	396
34.3	Preconditioned GMRES via Approximate Cardinal Functions	309	42.6	Summary	398
34.4	Change of Basis	311	43	RBF-PS Methods in MATLAB	401
34.5	Effect of the "Better" Basis on the Condition Number of the Interpolation Matrix	314	43.1	Computing the RBF-Differentiation Matrix in MATLAB	401
34.6	Effect of the "Better" Basis on the Accuracy of the Interpolant	316	43.1.1	Solution of a 1-D Transport Equation	403
35	Other Efficient Numerical Methods	321	43.2	Use of the Contour-Padé Algorithm with the PS Approach	405
35.1	The Fast Multipole Method	321	43.2.1	Solution of the 1D Transport Equation Revisited	405
35.2	Fast Tree Codes	327	43.3	Computation of Higher-Order Derivatives	407
35.3	Domain Decomposition	331	43.3.1	Solution of the Allen-Cahn Equation	409
36	Generalized Hermite Interpolation	333	43.4	Solution of a 2D Helmholtz Equation	411
36.1	The Generalized Hermite Interpolation Problem	333	43.5	Solution of a 2D Laplace Equation with Piecewise Boundary Conditions	415
36.2	Motivation for the Symmetric Formulation	335	43.6	Summary	416
37	RBF Hermite Interpolation in MATLAB	339	44	RBF Galerkin Methods	419
38	Solving Elliptic Partial Differential Equations via RBF Collocation	345	44.1	An Elliptic PDE with Neumann Boundary Conditions	419
38.1	Kansa's Approach	345	44.2	A Convergence Estimate	420
38.2	An Hermite-based Approach	348	44.3	A Multilevel RBF Galerkin Algorithm	421
38.3	Error Bounds for Symmetric Collocation	349	45	RBF Galerkin Methods in MATLAB	423
38.4	Other Issues	350	Appendix A	Useful Facts from Discrete Mathematics	427
39	Non-Symmetric RBF Collocation in MATLAB	353	A.1	Halton Points	427
39.1	Kansa's Non-Symmetric Collocation Method	353	A.2	<i>kd</i> -Trees	428
40	Symmetric RBF Collocation in MATLAB	365	Appendix B	Useful Facts from Analysis	431
			B.1	Some Important Concepts from Measure Theory	431
			B.2	A Brief Summary of Integral Transforms	432

B.3	The Schwartz Space and the Generalized Fourier Transform	433
Appendix C	Additional Computer Programs	435
C.1	MATLAB Programs	435
C.2	Maple Programs	440
Appendix D	Catalog of RBFs with Derivatives	443
D.1	Generic Derivatives	443
D.2	Formulas for Specific Basic Functions	444
D.2.1	Globally Supported, Strictly Positive Definite Functions	444
D.2.2	Globally Supported, Strictly Conditionally Positive Definite Functions of Order 1	445
D.2.3	Globally Supported, Strictly Conditionally Positive Definite Functions of Order 2	446
D.2.4	Globally Supported, Strictly Conditionally Positive Definite Functions of Order 3	446
D.2.5	Globally Supported, Strictly Conditionally Positive Definite Functions of Order 4	447
D.2.6	Globally Supported, Strictly Positive Definite and Oscillatory Functions	447
D.2.7	Compactly Supported, Strictly Positive Definite Functions	448
