

Quantum Field Theory and Critical Phenomena

Fourth Edition

JEAN ZINN-JUSTIN

*Commissariat à l'Energie Atomique
Direction des Sciences de la matière
Gif sur Yvette, France*

CLARENDON PRESS • OXFORD

2002

Contents

1 Algebraic Preliminaries	1
1.1 Gaussian Integrals	1
1.2 Perturbation Theory. Connected Contributions. Steepest Descent	3
1.3 Complex Structures	5
1.4 Grassmann Algebras. Differential Forms	6
1.5 Differentiation in Grassmann Algebras	8
1.6 Integration in Grassmann Algebras	9
1.7 Gaussian Integrals with Grassmann Variables	13
1.8 Legendre Transformation	16
1.9 Generating Functionals. Functional Derivatives. Determinants	18
Bibliographical Notes	18
2 Euclidean Path Integrals in Quantum Mechanics	19
2.1 Path Integrals: The General Idea	20
2.2 Path Integral Representation: Special Hamiltonians	21
2.3 Explicit Evaluation of a Path Integral: The Harmonic Oscillator	24
2.4 Partition Function. Correlation Functions	26
2.5 Generating Functional of Correlation Functions. Perturbative Expansion	29
2.6 Semi-Classical Expansion	35
Bibliographical Notes	39
A2	40
A2.1 The Two-Point Function: Spectral Representation	40
3 Path Integrals in Quantum Mechanics: Generalizations	42
3.1 General Hamiltonians: Phase Space Path Integral	42
3.2 Hamiltonians Quadratic in Momentum Variables	45
3.3 The Spectrum of the $O(2)$ Symmetric Rigid Rotator	50
3.4 The Spectrum of the $O(N)$ Symmetric Rigid Rotator	51
Bibliographical Notes	54
A3 Quantization of Spin Degrees of Freedom, Topological Actions	55
A3.1 Symplectic Form and Quantization: General Remarks	55
A3.2 Spin Dynamics and Quantization	56
A3.3 The Magnetic Monopole	59
4 Stochastic Differential Equations: Langevin, Fokker–Planck Equations	60
4.1 The Langevin Equation	60
4.2 A Simple Example: The Linear Langevin Equation	61
4.3 The Fokker–Planck Equation	63
4.4 Equilibrium Distribution. Correlation Functions	65
4.5 A Special Case: The Dissipative Langevin Equation	67

4.6 Path Integral Representation	69
4.7 General Discretized Langevin Equation	71
4.8 Brownian Motion on Riemannian Manifolds	73
Bibliographical Notes	78
A4 Discrete Markov Stochastic Processes: A Few Remarks	79
A4.1 The Spectrum of the Transition Matrix	79
A4.2 Detailed Balance	81
A4.3 Stochastic Process with Prescribed Equilibrium Distribution	82
5 Path and Functional Integrals in Quantum Statistical Physics	83
5.1 Quantum Mechanics: Holomorphic Formalism	83
5.2 Holomorphic Path Integral	86
5.3 Path Integrals with Fermions	90
5.4 Quantum Statistical Physics: Fixed Number of Particles	98
5.5 The Bose Gas. Functional Integrals	98
5.6 The Fermi Gas. Functional Integrals	106
Bibliographical Notes	109
6 Quantum Evolution: From Particles to Fields	110
6.1 Time Evolution and Scattering Matrix in Quantum Mechanics	111
6.2 Path Integral and S -Matrix: Perturbation Theory	113
6.3 Path Integral and S -Matrix: Semi-Classical Expansions	115
6.4 S -Matrix and Holomorphic Formalism	119
6.5 Fermi Gas: Evolution Operator	123
6.6 Relativistic Quantum Field Theory: The Scalar Field	124
6.7 The S -Matrix	128
6.8 S -Matrix and Field Asymptotic Conditions	131
6.9 Field Renormalization	135
6.10 S -matrix and Correlation Functions	137
6.11 The Non-Relativistic Limit	140
Bibliographical Notes	141
A6	142
A6.1 Time-Ordered Products of Operators	142
A6.2 Perturbation Theory in the Operator Formalism	143
7 Quantum Field Theory: Functional Methods and Perturbation Theory	145
7.1 Functional Integrals. Correlation Functions	146
7.2 Perturbative Expansion. Wick's Theorem and Feynman Diagrams	149
7.3 Algebraic Properties of Functional Integrals. Field Equations	153
7.4 Connected Correlation Functions. Cluster Properties	159
7.5 Legendre Transformation. Proper Vertices	164
7.6 Momentum Representation	167
7.7 Semi-Classical or Loop Expansion	168
7.8 Legendre Transformation and 1-Irreducibility	172
7.9 Loop Expansion at Higher Orders	173
7.10 Statistical and Quantum Interpretation of the 1PI Functional	175
Bibliographical Notes	178
A7	179
A7.1 Two-Loop Calculation	179
A7.2 The Background Field Method	180
A7.3 Cluster Properties of Connected Feynman Diagrams	181
8 Relativistic Fermions	184

8.1 Massive Dirac Fermions	184
8.2 Free Euclidean Relativistic Fermions	190
8.3 Partition Function. Correlations	194
8.4 Generating Functionals	197
8.5 Connection between Spin and Statistics	198
Bibliographical Notes	200
A8 Euclidean Fermions, Spin Group and γ Matrices	201
A8.1 Spin Group. Dirac γ Matrices	201
A8.2 The Example of Dimension 4	209
A8.3 Traces of Products of γ Matrices	209
A8.4 The Fierz Transformation	211
9 Quantum Field Theory: Divergences and Regularization	212
9.1 Divergences at One-Loop Order: The ϕ^3 Field Theory	213
9.2 Divergences General Analysis and Power Counting	216
9.3 Classification of Renormalizable Field Theories	220
9.4 Operator Insertions: Generating Functionals, Power Counting	222
9.5 Momentum Cut-Off and Regulator Fields	224
9.6 Lattice Regularization	228
9.6 Dimensional Regularization	232
Bibliographical Notes	237
A9 Schwinger's Proper Time Representation	239
A9.1 Schwinger's Proper Time Representation	239
A9.2 One-Loop Divergences	240
10 Introduction to Renormalization Theory. Renormalization Group Equations	243
10.1 Power Counting. Dimensional Analysis	243
10.2 Bare and Renormalized Field Theory. Operator ϕ^2 Insertions	245
10.3 One-Loop Divergences	248
10.4 Divergences Beyond One-Loop: Skeleton Diagrams	250
10.5 Callan–Symanzik Equations	253
10.6 Inductive Proof of Renormalizability	256
10.7 The $\langle \phi^2 \phi^2 \rangle$ Correlation Function	260
10.8 The Renormalized Action: General Construction	260
10.9 The Massless Theory	262
10.10 Homogeneous RG Equations: Massive Theory	266
10.11 Covariance of RG Functions	267
Bibliographical Notes	268
A10	270
A10.1 Large Momentum Mode Integration and General RG Equations	270
A10.2 Super-Renormalizable Field Theories: The Normal-Ordered Product	272
11 Dimensional Regularization, Minimal Subtraction: RG Functions	275
11.1 Renormalization Group (RG) Functions	275
11.2 Dimensional Regularization: The Form of Renormalization Constants	276
11.3 Minimal Subtraction Scheme	277
11.4 The Massless Theory	280
11.5 RG Functions at Two-Loop Order in the ϕ^4 Field Theory	281
11.6 Generalization to Several Component Fields	286
11.7 One-Loop RG Functions in a Theory with Scalar Bosons and Fermions	289
Bibliographical Notes	294
A11	295

A11.1 Feynman Parameters	295
12 Renormalization of Composite Operators. Short Distance Expansion	296
12.1 Renormalization of Operator Insertions	296
12.2 Quantum Field Equations	300
12.3 Short Distance Expansion (SDE) of Operator Products	304
12.4 Large Momentum Expansion of the SDE Coefficients: CS Equations	308
12.5 SDE Beyond Leading Order. General Operator Product	310
12.6 Light Cone Expansion (LCE) of Operator Products	311
Bibliographical Notes	312
13 Symmetries and Renormalization	313
13.1 Preliminary Remarks	313
13.2 Linear Global Symmetries	315
13.3 Linear Symmetry Breaking	318
13.4 Spontaneous Symmetry Breaking	322
13.5 Quadratic Symmetry Breaking	325
13.6 Chiral Symmetry Breaking in Strong Interactions	330
Bibliographical Notes	337
A13 Currents and Noether's Theorem	339
A13.1 Currents in Classical Field Theory	339
A13.2 Euclidean Quantum Field Theory	340
A13.3 The Energy–Momentum Tensor	341
A13.4 Energy–Momentum Tensor and Euclidean Field Theory	343
A13.5 Dilatation and Conformal Invariance	344
14 The Non-Linear σ-Model: An Example of a Non-Linear Symmetry	346
14.1 The Non-Linear σ -Model: Definition	346
14.2 Perturbation Theory. Power Counting	348
14.3 Regularization	350
14.4 Infrared (IR) Divergences	352
14.5 WT Identities and Master Equation	353
14.6 Renormalization	356
14.7 The Renormalized Action: Solution to the Master Equation	359
14.8 Renormalization of Composite Operators	362
14.9 A Linear Representation	362
Bibliographical Notes	364
15 General Non-Linear Models in Two Dimensions	365
15.1 Homogeneous Spaces and Goldstone Modes	365
15.2 WT Identities and Renormalization in Linear Coordinates	368
15.3 Renormalization in Arbitrary Coordinates, BRS Symmetry	372
15.4 Symmetric Spaces: Definition	376
15.5 The Classical Action. Conservation Laws	377
15.6 Quantum Theory: Perturbation Theory and RG Functions	380
15.7 Generalizations	385
Bibliographical Notes	386
A15 Homogeneous Spaces: A Few Algebraic Properties	388
A15.1 Pure Gauge. Maurer–Cartan Equations	388
A15.2 Metric and Curvature in Homogeneous Spaces	388
A15.3 Explicit Expressions for the Metric	390
A15.4 Symmetric Spaces: Classification	391
16 ST and BRS Symmetries, Stochastic Field Equations	396

16.1	Slavnov–Taylor (ST) Symmetry	397
16.2	Constraints and BRS Symmetry	399
16.3	Grassmann Coordinates, Gradient Equations	401
16.4	BRS Symmetry and Compatibility Condition, Group Manifolds	402
16.5	Stochastic Equations	404
16.6	Application: Stochastic Field Equations	409
16.7	Langevin and Fokker–Planck Equations	412
16.8	Time-Dependent Correlation Functions and Equilibrium	413
16.9	Renormalization and BRS Symmetry	416
	Bibliographical Notes	418
17	From Langevin Equation to Supersymmetry	419
17.1	The Purely Dissipative Langevin Equation	420
17.2	Supersymmetry and Equilibrium Correlation Functions	423
17.3	Stochastic Quantization of Two-Dimensional Chiral Models	425
17.4	Langevin Equation and Riemannian Manifolds	427
17.5	Scalar Supersymmetric Fields Below Four Dimensions	430
17.6	Supersymmetry in Four Dimensions	436
	Bibliographical Notes	443
A17	BRS and Supersymmetry. The Random Field Ising Model	445
A17.1	Extension of BRS Symmetries: Supersymmetry	445
A17.2	Supersymmetry: The Random Field Ising Model	446
18	Abelian Gauge Theories	448
18.1	The Massive Vector Field	448
18.2	Action with Fermion Matter	452
18.3	Massless Vector Field: Abelian Gauge Symmetry	453
18.4	Canonical Quantization and Gauge Invariance	455
18.5	Perturbation Theory, Regularization	461
18.6	WT Identities, Renormalization	465
18.7	Gauge Dependence	466
18.8	Renormalization Group Equations	469
18.9	The One-Loop β -Function	470
18.10	The Abelian Higgs Model	473
18.11	Quantization of the Higgs Model	474
18.12	Physical Observables. Unitarity of the S -Matrix	477
18.13	Stochastic Quantization: The Example of Gauge Theories	477
	Bibliographical Notes	479
A18	481
A18.1	Vacuum Energy and Casimir Effect	481
A18.2	Gauge Dependence	484
A18.3	Divergences at One-Loop with Schwinger’s Representation	485
19	Non-Abelian Gauge Theories: Introduction	487
19.1	Geometric Construction	487
19.2	Gauge Invariant Actions	490
19.3	Hamiltonian Formalism. Quantization	490
19.4	Perturbation Theory, Regularization	496
19.5	The Non-Abelian Higgs Mechanism	498
	Bibliographical Notes	502
A19	Massive Yang–Mills Fields	503
20	The Standard Model. Anomalies	505

20.1 The Standard Model of Weak–Electromagnetic Interactions	505
20.2 Quantum Chromodynamics: Renormalization Group	513
20.3 The Abelian Anomaly	518
20.4 Non-Abelian Anomaly	527
20.5 Physical Applications	529
Bibliographical Notes	531
21 Gauge Theories: Master Equation and Renormalization	532
21.1 Notation and Geometric Structure	532
21.2 Quantization	534
21.3 BRS Symmetry	535
21.4 WT Identities and Master Equation	536
21.5 Renormalization: General Considerations	538
21.6 The Renormalized Action	541
21.7 Gauge Independence	546
Bibliographical Notes	547
22 Classical and Quantum Gravity. Riemannian Manifolds and Tensors	549
22.1 Change of Coordinates. Tensors	549
22.2 Parallel Transport: Connection, Covariant Derivative	552
22.3 The Metric Tensor	555
22.4 The Curvature (Riemann) Tensor	556
22.5 Covariant Volume Element	560
22.6 Fermions, Vielbein, Spin Connection	561
22.7 Classical Gravity. Equations of Motion	563
22.8 Quantization in the Temporal Gauge: Pure Gravity	566
Bibliographical Notes	569
A22 Matrix Models in the Large N Limit and 2D Gravity	570
A22.1 Quantum 2D Euclidean Gravity	570
A22.2 The One-Matrix Model	571
A22.3 The Method of Orthogonal Polynomials	574
23 Critical Phenomena: General Considerations	577
23.1 Phase Transitions and Transfer Matrix	579
23.2 The Infinite Transverse Size Limit: Ising-Like Systems	581
23.3 Order Parameter and Cluster Properties	584
23.4 Stochastic Processes and Phase Transitions	586
23.5 Continuous Symmetries	587
Bibliographical Notes	588
A23 Quenched Averages	589
24 Mean Field Theory for Ferromagnetic Systems	592
24.1 Ising-like Ferromagnetic Systems	592
24.2 High Temperature Expansion	594
24.3 Mean Field Approximation	595
24.4 Universality within Mean Field Approximation	598
24.5 Beyond Mean Field Approximation	602
24.6 Power Counting and the Role of Dimension 4	606
24.7 Tricritical Points	608
Bibliographical Notes	608
A24 Mean Field Expansion: General Formalism	610
A24.1 Mean Field Approximation	610
A24.2 Mean Field Expansion	613

A24.3 High, Low Temperature and Mean Field Approximations	614
25 General Renormalization Group. The Critical Theory near Dimension Four	616
25.1 Renormalization Group: The General Idea	617
25.2 The Gaussian Fixed Point	622
25.3 Critical Behaviour: The Effective ϕ^4 Field Theory	625
25.4 Renormalization Group Equations near Four Dimensions	626
25.5 Solution of the RG Equations: The ε -Expansion	629
25.6 Critical Correlation Functions with $\phi^2(x)$ Insertions	632
Bibliographical Notes	635
26 Scaling Behaviour in the Critical Domain	636
26.1 Strong Scaling above T_c : The Renormalized Theory	637
26.2 Expansion around the Critical Theory	641
26.3 Scaling Laws above T_c	641
26.4 Correlation Functions with ϕ^2 Insertions	643
26.5 Scaling Laws in a Magnetic Field and Below T_c	645
26.6 The N -Vector Model	648
26.7 Asymptotic Expansion of the Two-Point Function	654
Bibliographical Notes	656
A26 The Specific Heat for $\alpha = 0$	658
27 Corrections to Scaling Behaviour	660
27.1 Corrections to Scaling: Generic Dimensions	660
27.2 Logarithmic Corrections at the Upper-Critical Dimension	662
27.3 Irrelevant Operators and the Question of Universality	665
27.4 Corrections Coming from Irrelevant Operators. Improved Action	667
27.5 Application: Uniaxial Systems with Strong Dipolar Forces	669
Bibliographical Notes	674
28 Non-Magnetic Systems and the $(\phi^2)^2$ Field Theory	675
28.1 Statistics of Self-Repelling Chains, Approximations	675
28.2 Liquid-Vapour Phase Transition and Field Theory	680
28.3 Superfluid Transition	685
Bibliographical Notes	689
29 Calculation of Universal Quantities	690
29.1 The ε -Expansion	690
29.2 The Perturbative Expansion at Fixed Dimension	698
29.3 The Series Summation	700
29.4 Numerical Estimates of Critical Exponents	702
29.5 Comparison with Lattice Model Estimates	704
29.6 Critical Exponents from Experiments	705
29.7 Amplitude Ratios	706
Bibliographical Notes	707
30 The $O(N)$ Vector Model for N Large	710
30.1 The Large N Action	710
30.2 Large N Limit: Saddle Point Equations, Critical Domain	712
30.3 RG Functions and Leading Corrections to Scaling	718
30.4 Small Coupling Constant, Large Momentum Expansions for $d < 4$	720
30.5 Dimension 4: Triviality, Higgs Mass	721
30.6 The Non-Linear σ -Model in the Large N Limit	723
30.7 The $1/N$ -Expansion: An Alternative Field Theory	727
30.8 Explicit Calculations: Critical Exponents	729

Bibliographical Notes	731
31 Phase Transitions near Two Dimensions	733
31.1 $(\phi^2)^2$ Field Theory and Non-Linear σ -Model	734
31.2 The Non-Linear σ -Model: Symmetry Breaking, RG Equations	736
31.3 RG Equations: Discussion	739
31.4 Results Beyond One-Loop	743
31.5 The Dimension 2	746
31.6 Generalizations	747
31.7 The Gross–Neveu Model	747
31.8 The Gross–Neveu–Yukawa Model	750
31.9 GNY and GN Models in the Large N Limit	752
31.10 The Large N Expansion	756
Bibliographical Notes	758
32 Two-Dimensional Models and Bosonization Method	759
32.1 The Free Massless Scalar Field	759
32.2 The Free Massless Dirac Fermion	763
32.3 The Sine-Gordon Model	769
32.4 The Schwinger Model	771
32.5 The Massive Thirring Model	774
32.6 A Two-Fermion Model	777
Bibliographical Notes	781
A32 A Few Additional Results	782
A32.1 The Schwinger Model	782
A32.2 The $SU(N)$ Thirring Model	783
A32.3 Solitons in the Sine-Gordon Model	786
33 The $O(2)$ Classical Spin Model in Two Dimensions	787
33.1 The Spin Correlation Functions	788
33.2 Correlation Functions in a Field	790
33.3 The Coulomb Gas in Two Dimensions	791
33.4 $O(2)$ Spin Model and Coulomb Gas	795
33.5 The Critical Two-Point Function in the $O(2)$ Model	797
33.6 The Generalized Thirring Model	799
Bibliographical Notes	799
34 Critical Properties of Gauge Theories	800
34.1 Gauge Invariance on the Lattice	800
34.2 The Pure Gauge Theory	802
34.3 Wilson’s Loop and Confinement	805
34.4 Mean Field Approximation	810
Bibliographical Notes	813
A34 Gauge Theory and Confinement in Two Dimensions	815
35 UV Fixed Points in Quantum Field Theory	817
35.1 The $(\phi^2)^2$ Field Theory: Large Momentum Behaviour and Triviality	817
35.2 General ϕ^4 -like Field Theories: $d = 4$	822
35.3 Theories with Scalar Bosons and Fermions	824
35.4 Gauge Theories	826
35.5 Applications: The Theory of Strong Interactions	828
Bibliographical Notes	831
36 Critical Dynamics	832
36.1 Dissipative Case: RG Equations near Four Dimensions	833

36.2 Dissipative Case: RG Equations Near Two Dimensions	837
36.3 Conserved Order Parameter	839
36.4 Relaxational Model with Energy Conservation	840
36.5 A Non-Relaxational Model	843
Bibliographical Notes	845
A36 RG Functions at Two Loops: Supersymmetric Perturbation Theory	847
A36.1 The $(\phi^2)^2$ Field Theory: Dynamic Exponent	847
A36.2 The Non-Linear σ -Model	849
37 Field Theory in a Finite Geometry: Finite Size Scaling	852
37.1 Renormalization Group in Finite Geometries	852
37.2 Momentum Quantization	856
37.3 The ϕ^4 Field Theory in a Periodic Hypercube	858
37.4 The ϕ^4 Field Theory: The Cylindrical Geometry	864
37.5 Finite Size Effects in the Non-Linear σ -Model	868
37.6 Finite Size Effects and Dynamics	874
Bibliographical Notes	878
A37	880
A37.1 Discrete Symmetries and Finite Size Effects	880
A37.2 Perturbation Theory in a Finite Volume	884
38 Quantum Field Theory at Finite Temperature: Equilibrium Properties	885
38.1 Finite (and High) Temperature Field Theory	885
38.2 The Example of the $\phi_{1,d-1}^4$ Field Theory	889
38.3 High Temperature and Critical Limits	894
38.4 The Non-Linear σ -Model in the Large N Limit	898
38.5 The Non-Linear σ -Model: Dimensional Reduction	902
38.6 The Gross-Neveu in the Large N Expansion	909
38.7 Abelian Gauge Theories	915
38.8 Non-Abelian Gauge Theories	923
Bibliographical Notes	926
A38 Feynman Diagrams at Finite Temperature	928
A38.1 One-Loop Calculations	928
A38.2 Group Measure	930
39 Instantons in Quantum Mechanics	931
39.1 The Quartic Anharmonic Oscillator for Negative Coupling	932
39.2 A Toy Model: A Simple Integral	933
39.3 Quantum Mechanics: Instantons	935
39.4 Instanton Contribution at Leading Order	936
39.5 General Potentials: Instanton Contributions	941
39.6 Gaussian Integration: The Shifting Method	942
39.7 Low Temperature Evaluation	948
Bibliographical Notes	949
A39	950
A39.1 Classical Equations of Motion	950
A39.2 The WKB Method	952
A39.3 The Average Action in Path Integrals	955
40 Unstable Vacua in Quantum Field Theory	956
40.1 The ϕ^4 Field Theory for Negative Coupling	957
40.2 General Potentials: Instanton Contributions	962
40.3 The ϕ^4 Field Theory in Dimension 4	963

40.4 Instanton Contributions at Leading Order	965
40.5 Coupling Constant Renormalization	968
40.6 The Imaginary Part of the n -Point Function	970
40.7 The Massive Theory	971
40.8 Cosmology: The Decay of the False Vacuum	972
Bibliographical Notes	973
A40 Instantons: Additional Remarks	974
A40.1 Virial Theorem	974
A40.2 Sobolev Inequalities	975
A40.3 Instantons and RG Equations	977
A40.4 Conformal Invariance	978
41 Degenerate Classical Minima and Instantons	980
41.1 The Double-Well Potential	980
41.2 The Periodic Cosine Potential	982
41.3 Instantons and Stochastic Dynamics	985
41.4 Instantons in Stable Boson Field Theories: General Remarks	988
41.5 Instantons in $CP(N - 1)$ Models	990
41.6 Instantons in the $SU(2)$ Gauge Theory	992
Bibliographical Notes	995
A41	996
A41.1 Trace Formula for Periodic Potentials	996
42 Perturbation Series at Large Orders. Summation Methods	997
42.1 Quantum Mechanics	997
42.2 Scalar Field Theory	1000
42.3 The ϕ^4 Field Theory in Four Dimensions	1001
42.4 Field Theories with Fermions	1005
42.5 Divergent Series, Borel Summability	1010
42.6 Large Order Behaviour and Borel Summability	1011
42.7 Practical Summation Methods	1012
Bibliographical Notes	1016
A42	1018
A42.1 Large Order Behaviour for Simple Integrals	1018
A42.2 Non-Loop Expansions	1018
A42.3 Linear Differential Approximants	1019
43 Multi-Instantons in Quantum Mechanics	1020
43.1 The Double-Well Potential	1021
43.2 The Periodic Cosine Potential	1028
43.3 General Potentials with Degenerate Minima	1032
43.4 The $O(\nu)$ Symmetric Anharmonic Oscillator	1035
43.5 Generalized Bohr-Sommerfeld Quantization Formula	1037
Bibliographical Notes	1038
A43	1039
A43.1 Multi-Instantons: The Determinant	1039
A43.2 The Instanton Interaction	1040
A43.3 A Simple Example of Non-Borel Summability	1042
A43.4 Multi-Instantons and WKB Approximation	1044
Index	1047
