Contents

Preface x

1 | Statistics: The Art and Science of Learning from Data 02

- 1.1 How Can You Investigate Using Data? 04
- 1.2 We Learn about Populations Using Samples 09
- 1.3 What Role do Computers Play in Statistics? 16
- Chapter Summary 21
- Chapter Problems 21

2 | Exploring Data with Graphs and Numerical Summaries 24

- 2.1 What Are the Types of Data? 26
- 2.2 How Can We Describe Data Using Graphical Summaries? 30
- 2.3 How Can We Describe the Center of Quantitative Data? 48
- 2.4 How Can We Describe the Spread of Quantitative Data? 56
- 2.5 How Can Measures of Position Describe Spread? 64
- 2.6 How Are Descriptive Summaries Misused? 74
- Answers to Chapter Figure Questions 79
- Chapter Summary 80
- Chapter Problems 81

3 | Association: Contingency, Correlation, and Regression 88

- 3.1 How Can We Explore the Association between Two Categorical Variables? 90
- 3.2 How Can We Explore the Association between Two Quantitative Variables? 97
- 3.3 How Can We Predict the Outcome of a Variable? 109
- 3.4 What Are Some Cautions in Analyzing Associations? 122
- Answers to Chapter Figure Questions 138
- Chapter Summary 139
- Chapter Problems 139

4 | Gathering Data 146

- 4.1 Should We Experiment or Should We Merely Observe? 148
- 4.2 What Are Good Ways and Poor Ways to Sample? 155
- 4.3 What Are Good Ways and Poor Ways to Experiment? 167
- 4.4 What Are Other Ways to Perform Experimental and Observational Studies? 173
- Answers to Chapter Figure Questions 184
- Chapter Summary 184
- Chapter Problems 184

5 | Probability in Our Daily Lives 192

- 5.1 How Can Probability Quantify Randomness? 194
- 5.2 How Can We Find Probabilities? 201
- 5.3 Conditional Probability: What's the Probability of A, Given B? 214
- 5.4 Applying the Probability Rules 224
- Answers to Chapter Figure Questions 237
- Chapter Summary 237
- Chapter Problems 238

6 | Probability Distributions 244

- 6.1 How Can We Summarize Possible Outcomes and Their Probabilities? 246
- 6.2 How Can We Find Probabilities for Bell-Shaped Distributions? 257
- 6.3 How Can We Find Probabilities When Each Observation Has Two Possible Outcomes 268
- 6.4 How Likely Are the Possible Values of a Statistic? The Sampling Distribution 278
- 6.5 How Close Are Sample Means to Population Means 288
- 6.6 How Can We Make Inferences About a Population? 297

Answers to Chapter Figure Questions 304

Chapter Summary 304

Chapter Problems 305

7 | Statistical Inference: Confidence Intervals 314

- 7.1 What Are Point and Interval Estimates of Population Parameters? 316
- 7.2 How Can We Construct a Confidence Interval to Estimate a Population Proportion? 322
- 7.3 How Can We Construct a Confidence Interval to Estimate a Population Mean? 333
- 7.4 How Do We Choose the Sample Size for a Study? 345
- 7.5 How Do Computers Make New Estimation Methods Possible? 354

Answers to Chapter Figure Questions 358

Chapter Summary 358

Chapter Problems 359

8 | Statistical Inference: Significance Tests About Hypotheses 366

- 8.1 What Are the Steps for Performing a Significance Test? 368
- 8.2 Significance Tests About Proportions 372
- 8.3 Significance Tests About Means 388
- 8.4 Decisions and Types of Errors in Significance Tests 400
- 8.5 Limitations of Significance Tests 404
- 8.6 How Likely Is a Type II Error (Not Rejecting H_0 , Even though It's False)? 411

Answers to Chapter Figure Questions 417

Chapter Summary 417

Chapter Problems 419

9 | Comparing Two Groups 424

- 9.1 Categorical Response: How Can We Compare Two Proportions? 427
- 9.2 Quantitative Response: How Can We Compare Two Means? 439
- 9.3 Other Ways of Comparing Means and Comparing Proportions 451
- 9.4 How Can We Analyze Dependent Samples? 458
- 9.5 How Can We Adjust for Effects of Other Variables? 469

Answers to Chapter Figure Questions 475

Chapter Summary 475

Chapter Problems 476

10 | Analyzing the Association Between Categorical Variables 484

- 10.1 What Is Independence and What Is Association? 486
- 10.2 How Can We Test Whether Categorical Variables are Independent? 490
- 10.3 How Strong Is the Association? 503
- 10.4 How Can Residuals Reveal the Pattern of Association? 510
- 10.5 What if the Sample Size Is Small? Fisher's Exact Test 514

Answers to Chapter Figure Questions 518

Chapter Summary 519

Chapter Problems 519

11 | Analyzing Association Between Quantitative Variables: Regression Analysis 524

- 11.1 How Can We "Model" How Two Variables Are Related? 526
- 11.2 How Can We Describe Strength of Association? 534
- 11.3 How Can We Make Inferences About the Association? 546
- 11.4 What Do We Learn from How the Data Vary Around the Regression Line? 553
- 11.5 Exponential Regression: A Model for Nonlinearity 563

Answers to Chapter Figure Questions 568

Chapter Summary 569

Chapter Problems 570

12 | Multiple Regression 576

- 12.1 How Can We Use Several Variables to Predict a Response? 578
- 12.2 Extending the Correlation and R-Squared for Multiple Regression 583
- 12.3 How Can We Use Multiple Regression to Make Inferences? 588
- 12.4 Checking a Regression Model Using Residual Plots 599
- 12.5 How Can Regression Include Categorical Predictors? 604
- 12.6 How Can We Model a Categorical Response? 610
- Answers to Chapter Figure Questions 618
- Chapter Summary 619
- Chapter Problems 619

13 | Comparing Groups: Analysis of Variance Methods 624

- 13.1 How Can We Compare Several Means?: One-Way ANOVA 626
- 13.2 How Should We Follow Up an ANOVA F Test 636
- 13.3 What if There Are Two Factors?: Two-Way ANOVA 645
- Answers to Chapter Figure Questions 659
- Chapter Summary 659
- Chapter Problems 660

14 | Nonparametric Statistics 666

- 14.1 How Can We Compare Two Groups by Ranking? 668
- 14.2 Nonparametric Methods for Several Groups and for Matched Pairs 679
- Answers to Chapter Figure Questions 689
- Chapter Summary 690
- Chapter Problems 690

Appendices A1

A: Tables A1

B: Selected Answers A7
